

FPS PUMPS

Umbr Pompe Acuatec Submersible Well Borehole Pump

The ACUATEC series of multi-stage pumps from Umbr Pompe are ideal for applications in processing, spraying, potable water, irrigation, industry and agriculture. They are the ideal pump if you need a good flow at high pressure.

The body of the pump is made with 304 stainless steel, whilst there are thermoplastic impellers and diffusers. The pumps in this series feature starting capacitors and integral motor protection, which allow for a quick and straightforward installation.

Each of the ACUATEC pumps comes with a 20m heavy-duty rubber power cable as standard. They are available to purchase with or without a float switch. On the manual version, which has no float switch, it is still possible to control these by using a pressure controller in the delivery line.

There are both manual and automatic options available for the ACUATEC 40, the ACUATEC 60 and the ACUATEC 80 pumps. Each of these pumps has 6+ bore hole size.

Suitable for:

- Well / Boreholes
- Industry
- Agriculture
- Irrigation
- Portable water
- Spraying
- Processing
