STEP

Diagram 2
Pulley Installation

Be careful to assemble all components in the sequence they are presented.

NOW IS THE TIME TO MAKE ALL NECESSARY CABLE ADJUSTMENTS

After cable installation is complete you must check all cables for proper tension. Obvious signs that cable tension problems exist include:

- Top Plate (20) does not rest directly on the top Weight Stack Plate (26).
- The holes in the Selector Rod (21) do not line up with holes in the Weight Stack Plates (26).
- Cable(s) are sloppy and there is no resistance from the weight stack for the first few inches of the exercise.

There are Five areas for cable adjustment on the G3S:

- A. Selector Rod Top Bolt (22)
- B. Two adjustments in Double Pulley Holder (X).
- C. Two Rubber Stops (85) one on Angled Vertical Frame (D) and one on Seat Frame (H).

SEE NOTE 1 ON PAGE 27

If there is too much tension, and the Top Plate (20) is not resting directly on top of the weight stack plates:

- 1st. -Tighten Rubber Stop (85).
- 2nd. -Move Pulley (B4) down to a lower hole in Double Pulley Holder (X), or move Pulley (A7) up to a higher hole in Double Pulley Holder (X).

If there is too much play or excessive slack;

- 1st. -Loosen Rubber Stop (85).
- 2nd. -Move Pulley (B4) up to a higher hole in Double Pulley Holder (X), or move Pulley (A7) down to a lower hole in Double Pulley Holder (X).
- 3rd. -Screw the Selector Rod Top Bolt (22) farther into the Selector Rod (21) of the weight stack.

NOTE:

Cables should be inspected daily and adjusted periodically to ensure safe and smooth operation.

NOTE:

After cable adjustment is complete, you should now wrench tighten all bolts. Do NOT re-tighten any pad bolts.

STEP 13

NOTE 1
Check Jam Nut (25) weekly to be sure it is tight and locked onto the Selector Rod (22).

⚠ WARNING ⚠

Selector Rod Top Bolt (22) must be threaded a minimum of 1/2" into the Selector Rod (22), and Jam Nut (25) tightened securely against spring lock washer (21) to ensure proper connection.
