CobraHead® Garden Tools Information & Specifications

Original CobraHead® CobraHead® 'mini' Weeders & Cultivators

These all-purpose, hand-held garden tools weed, cultivate, dig, transplant plants, and do numerous other tasks well. The CobraHead® blade can be thought of as a steel fingernail® and the tools can be regarded as extensions of the user's hands.

These tools incorporate a handle that is a mix of recycled plastic and an organic strengthening fiber. They are among the "greenest" garden tools available. The composite handle is extremely tough and durable. It is molded around the blade shaft in a way that the blade cannot work loose. The handle is comfortable for either right hand or left hand use.

The blade makes it an ideal tool for cultivating, digging out plants and bulbs, as well as transplanting. It is also an effective furrower and hole maker for seeding purposes. It can replace commonly used garden tools including trowels, small hand forks, dibbles, and hand hoes.

The Original CobraHead® Weeder and Cultivator weighs 9 oz. (255 g). It is 13" (33 cm) long.

The CobraHead® 'mini' Weeder and Cultivator weighs 4.5 oz. (128 g). It is 8.75" (22 cm) long.

CobraHead® Long Handle Weeder & Cultivator

Using the same "steel fingernail®" blade design as the award-winning CobraHead® Weeder and Cultivator hand tool, this tough long-handled tool is exceptionally well made and easy to use. Numerous gardening, landscaping, and agricultural tasks are performed while standing up.

Uses for the tool include cultivating, weeding, scalping, furrowing, raking, de-thatching, edging, compost bed maintenance, and more!

Older gardeners and gardeners with limited kneeling and bending ability will find the tool to be an especially enabling device.

The tool is ideal for agricultural workers for whom short-handled tools are either discouraged or not allowed. It weeds deeply and precisely next to crops without damaging the crops or their roots. The tool features a white ash handle. The blade is easily replaceable.

The CobraHead® Long Handle weighs approx. 2 lbs. 6 oz. (1.08 kg).

Three handle lengths are available:
48" (122 cm), 54" (137 cm), 60" (152 cm).

Overall tool lengths are 56" (142 cm), 62" (158 cm), and 68" (173 cm).

CobraHead® Broadfork

Broadforks are becoming increasingly popular with small farmers and home gardeners who do not wish to use motorized tillers. Broadforks can aerate and loosen soils with much less damage to soil structure. They also don't stir up weed pieces and weed seeds like a tiller. Forks require no power and do not put gasoline fumes into the garden. In many cases, a fork is easier to use than a tiller.

The CobraHead® Broadfork is strong, light, and very easy to use. The tines are mounted through the crossbar which increases the tool's strength and makes cleanup easier. The 1045 carbon steel is extremely resistant to bending or breaking. The optimally curved round tines penetrate the toughest soils, and the flexible ash handles make our broadfork a pleasure to work with. Working up previously gardened areas is a snap, and the tool is great for cleaning up overgrown areas and harvesting root vegetables.

Overall Height: 57"
Handle Length: 48"
Width at widest point: 21"
Width – outside of tine to tine: 17 1/2"
Tine working Length: 9 1/4"
Tine diameter: 5/8"
Weight: 14 lbs (6.4kg)
