

WARNING - Causing Damage by hanging from the rim will VOID the warranty!!!

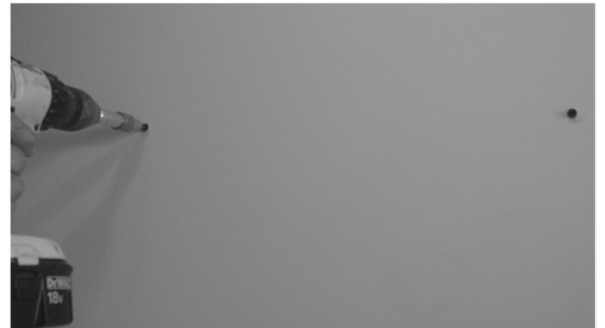

Wall Mounting Instructions

1. Using your stud finder locate a wall stud and make a mark 10.5" above the highest point your player can reach.

2. Use a level and tape measure to make a second mark 16" from the first mark you made. Make sure there is a stud behind this mark.
*If your studs are not 16" apart you may need to mount a solid board to the wall then mount your goal to the board.

3. Drill two wood screws into the marks you made.
Leave about 1/4" so you can hang your goal on the screws.

4. Using the upper wall mount holes, hang the goal on the screws and finish tightening the screws with your drill.

5. Use your level to insure the wall mounting brackets are vertical.

6. Raise the backboard so you have clearance to screw in the lower wall mounting screws.

7. Have a blast with your new RAMgoal.
