

HIDA - WOOD CHOICE

White Oak

Solid and hard, the wood grain is straight with a unique presence. A shining silver grain similar to the stripes on the back of a tiger, known as tiger stripes, appears, giving it a unique look. Hida Sangyo mainly uses North American white oak that is around 100 years old. *Oak wood may be used for some parts such as curved wood parts.

Beech

At the time of our founding, we started making bentwood furniture using the rich forest resources of the beech forest in this area where the tradition of craftsmanship in Hida is still alive. Domestic beech has a fine grain and is sticky, making it suitable for bentwood processing. Hida Sangyo mainly uses European beech.

Walnut

Walnut is one of the world's three major woods along with teak and mahogany. It is a high-class material with a subdued color and a beautiful heathered grain with a profound feeling. It will be polished and the texture will deepen as you use it. Hida Sangyo uses black walnut wood from North America.
