1.PC Software Download	2
2.Set Password and Fingerprints	7
3.Data Backup	9
4.Restore Factory Setting	10

Note: The USB drive will be a little heat during work, but it is a normal situation and you don't need to worry about it.

1.PC Software Download

1.Please don't worry if you find there is only a little space, it means that you have set a password on the phone and the flash drive is under encryption status. You just need to download the PC software and enter the password you set on the phone.
