Insert drain lip

Attach clamp

Once disposal is attached, follow the disposal manufacturer's instructions and safety precautions for attaching plumbing, electrical power, and operation. Using strainer baskets, plug sink and fill with water to test for leaks.

*For added leverage, place the base of the disposal in the palm of your hand and put that elbow on the floor of the cabinet.

Liquid dish soap can be used as a seal lubricant for the lip insertion. (Never use oil or grease)
Insert one side of drain or disposer's lip, then pull to stretch the rubber seal, then drop the back end in.
The clamp is designed to close if seal is seated properly. Gently wiggle disposer or drain fitting to seat the seal.
Start one side of clamp and make sure it is seated properly, then close the other side.
*For added leverage, place the base of the disposal in the palm of your hand and put that elbow on the floor of the cabinet. The other hand guides the throat and lip into the rubber mounting seal.

RECOMMENDED DISPOSALS

For a hassle free install we recommend the **In-Sink-Erator** Disposals. All their models fit beautifully except for their "Batch Feed" models. (Batch Feed Disposals start when the disposal plug is inserted into the disposal opening).

Another popular brand is **Waste King Disposals**. Several of their models require an adapter, which we will ship via FedEx Ground free of charge. Waste King has also certified that their 9000 series "batch feed" disposer will work with the PermaClean Drain System.

Waste King EZ Mount Adapter

Avoid the Sears Kenmore. It mounts perfectly, but needs a small insert to stabilize our splash guard (insert provided free if asked - via FedEx ground)
