The DermaSound Ultra is the right investment for any skincare business – big or small

The Dermasound Ultra is a game-changer and the wisest investment I have ever made in my business. Designed to address all your clients' needs—acne, anti-aging, pigmentation, dehydration, among others.

"You haven't had a facial until you have had a DermaSound Ultra Facial" that is a direct quote from one of my clients. They also have said that I have spoiled them, and a basic Facial is just fluff! At my skincare studio, every facial or peel starts with the DermaSound Ultra. I even use it as the first step for Microneedling Treatments.

The Dermasound Ultra is a game-changer and the wisest investment I have ever made in my business. Designed to address all your clients' needs—acne, anti-aging, pigmentation,

dehydration, among others. Your clients will see excellent results with just one DermaSound Ultra Treatment and will keep coming back for more!

So what is the DermaSound Ultra? It is a 3 -Step system that performs three separate modalities: exfoliation, infusion, and microcurrent using a hand-held device. The hand-held device is a spatula/blade that connects to a sophisticated control unit that is customizable.

The DermaSound Ultra exfoliates with water! Yes, I said water! Those little water molecules come into contact with the electrical current that runs through the blade/spatula and spin at high speeds—literally buffing the skin, loosening dirt debris, environmental impurities, and those pesky dead skin cells that like to stick around. Who benefits? Everyone! We often see cellular build-up with acne and aging, but this accumulation can be removed with the exfoliating action of the DermaSound. *It can remove up to 25 layers of debris. Impressive!*

The Infusion setting on the DermaSound Ultra utilizes ultrasound technology, creating small pathways for product infusion into the deeper layers of skin. The vibration also helps break apart particulates of ingredients, improving the injection of nutrients by 60% over manual massage. Results of this infusion step are especially noticeable when dealing with fine lines and wrinkles.

The Microcurrent setting is magical! Hokie right....let me tell you! It's one of the best treatments for your skin cells' health and feels like a massage—it's so relaxing. Microcurrent rejuvenates and resets the skin cell's ATP metabolism, improves cellular product infusion and waste removal, and brightens the complexion through enhanced blood flow. So amazing!

The DermaSound Ultra is so versatile and can be coupled with any chemical peel and most treatment modalities. Just remember, be aware of the contraindications for its use. GlyMed Plus provides a simple questionnaire to assist in this process.

The DermaSound Ultra is the right investment for any skincare business—big or small. I feel it can replace other expensive equipment. The DermaSound Ultra being so versatile, can be used within most client protocols and take your facial or peel to the next level. It will not disappoint!

If you have any questions and would like to speak to one of our friendly Master Aestheticians in your area, please email support@glymedplusaustralia.com.au
