

What is Advanced Drone Technology and How Does it Work?

Mar 22, 2019 11:59:32 AM / by The Institute of Skin Science

Advanced Drone Technology is a delivery system using specific receptor like ingredients to directly influence targeted skin cells. It works to reverse, repair and prevent future damage at the cellular level. This advanced system delivers potent active ingredients to quickly provide outstanding results. This [webinar](#) dives deep into the science of these ingredients and why everyone should be using them to combat the signs of aging, hyperpigmentation and loss of elasticity for youthful baby-like skin!

Advanced Drone Technology is the delivery system that uses dual encapsulated super peptides to directly treat targeted areas of our skin cells. This double encapsulation uses special peptide receptors to actively find and treat targeted skin cells.

For example, the wrinkle filling drone only targets the fibroblast to stimulate glycosaminoglycans, also known as GAGs, to maintain and support the synthesis of collagen elastin and hyaluronic acid. The results are ninety-three percent increase of elasticity and an eighty-two percent increase of firmness in the skin.

There are a few key differences between an Advanced Drone Technologies dual encapsulation and other encapsulated ingredients. Though effective, ingredients with a single encapsulation are more quickly dissolved by the skin and do not have as much time to target and treat the

parts of the cells that need the ingredients the most. Our Advanced Drone Technology contains a second protective coating that allows this super peptide to go further into the skin. This means that it has more time to find its targeted destination and release its active ingredients making this delivery system more concentrated and effective.

Here at GlyMed Plus, we feature two forms of Advanced Drone Technology:

[Diamond Bright Skin Lightener](#)

Diamond Bright Skin Lightener's drone only targets damaged melanocytes and releases its ingredients to reduce the overproduction of melanin while leaving all other skin cells alone.

[Wrinkle Remedy](#)

The second form of Advanced Drone Technology that we feature is found in our brand-new product. Wrinkle Remedy's drone specifically targets in neurons to help temporarily inhibit the communication channels for muscle contractions while boosting collagen production, helping to smooth and soften expression lines.

Here at GlyMed Plus we are so excited to be able to introduce the power of Advanced Drone Technology to you available in our Wrinkle Remedy and Diamond Bright Skin Lightener products.

If you have any questions and would like to speak to one of our friendly Master Aestheticians in your area please email support@glymedplusaustralia.com.au
