The new 5th generation of HydroTap technology

Some brands only redesign, we innovate. The all new HydroTap, now in its 5th generation, is our most advanced product to date and represents a number of innovations that deliver higher quality, increased efficiency and improved hygiene.

6 reasons to choose the all new HydroTap G5

1

Enhanced user experience

The all new HydroTap features our latest and most innovative technology - the 5th generation of developments. From the intuitive command centre interface and protective boiling water safety lock, to the water conserving air-cooled chilling system and customisable energy saving settings, this is our best ever system

3

Innovative design

Our G5 command centre is available with two new sleek tap designs - the Classic Plus with SteriTouch® touch-pad and the Touch Free Wave with infrared sensor operation

5

Sub micron filtration technology

All of our HydroTaps feature our industry leading 0.2 micron MicroPurity™ filtration technology that filters out dirt, lead, cysts and microplastics for pure-tasting drinking water

2

HydroCare service plans

All of our customers have the option to be supported by our range of simple and effective HydroCare service plans that provide pure-tasting water for the lifetime of the Zip HydroTap

4

Sustainability goals

The HydroTap can contribute towards the delivery of your business sustainability goals by promoting refill culture, helping you eradicate single-use plastic water bottles

6

Workplace wellbeing

Our HydroTap range will help keep your employees hydrated and healthy by providing great tasting drinking water they want to drink - putting wellbeing at the heart of the workplace as well as boosting productivity

Hygiene focused innovation

Our two latest tap designs - including the brand new HydroTap Classic Plus - are tailor-made for the workplace. With innovative hygiene-focused design elements they are a perfect solution for communal facilities and areas where health and hygiene are a priority.

New HydroTap Classic Plus

SteriTouch® antimicrobial silicone

SteriTouch® is an antimicrobial additive for materials used in the Classic Plus tap operation controls and key components in the command centre water path to reduce bacteria by 99.99%. This built in protection lasts the lifetime of the product and tests have proved to be 99.9% effective against bacteria like legionella in real world environments, so users can feel confident and comfortable when accessing communal drinking water facilities.

HydroTap Touch Free Wave

Touch-free technology

Our touch-free technology delivers increased hygiene for workplaces of all sizes. Smart infrared sensors detect your hand when within 1.5-5cm of the tap and the LED light illuminates when in range. Once the hand is moved away from the sensor the water flow stops immediately. To dispense boiling water, the safety lock sensor at the back of the tap must also be activated. It will not dispense if it is touched or grabbed.

The all new Zip HydroTap

Powered by our most innovative command centre yet

You can benefit from pure-tasting, instant filtered boiling, chilled and sparkling drinking water, all powered by just one single clever under-counter unit. This is our 'magic box' that boasts the very latest in hygiene, user-safety and energy efficient technology.

Improved user experience

Create your preferred settings with a few touches using the optimised new menu in the HydroTap command centre. Select energy modes and usage settings for easier customisation and check remaining filter life and CO₂ levels (on sparkling models).

MicroPurity filtration

Bacteria can be as small as 0.4 micron but Zip MicroPurity™ filtration removes contaminants as small as 0.2 micron. That includes dirt, lead, microplastics, 99.9% of microbiological cysts and 97% of chlorine.

SteriTouch® for hygiene

SteriTouch® is an antimicrobial additive and the HydroTap employs it in key components in the G5 command centre water path and the Classic Plus touchpad – to ensure 99.99% of bacteria is reduced.

Environmentally-friendly gas

The HydroTap now uses R290 refrigerant gas, in line with updated good environmental practice and advice.

Air-cooled system

The air-cooled system eliminates the need for water in the cooling process, making it a great choice for the environmentally conscious.

Energy efficient technology

New innovation is driving energy efficiency from our Power-Pulse™ energy saving technology to the 'sleep' function that reduces energy usage while not in use.

Power-Pulse technology

Zip Power-Pulse™ technology maintains stored boiling water to within 0.2°C of set temperature, meaning no water is wasted waiting for it to heat up.

*Command centre must be installed with a ventilation tray, not pictured.

THE NEXT GENERATION

Pioneering Zip technology

Every Zip HydroTap is driven by our pioneering technology and proprietary innovations.

The MicroPurity 0.2 micron filtration is certified to reduce chlorine, taste, odour, bacteria, sediment and limescale in line with NSF 42 and WaterMark requirements.

The under-counter system houses the key components to deliver instant boiling, chilled, sparkling water. Zip Power-Pulse™ technology maintains stored boiling water to within 0.2°C of set temperature, meaning no water is wasted waiting for it to heat up. This is the most efficient way of heating and maintaining a set boiling water temperature, delivering instantaneous small energy bursts efficiently instead of overheating and cooling.

Our high-performance closed refrigeration system has been refined to become our Direct DryChilling innovation. Meanwhile, our bespoke ColdCore Compression technology delivers dramatically improved sparkling water, which can only be achieved at lower temperatures.

NEW

SteriTouch®* antimicrobial silicone touchpad ensures 99.99% of bacteria is reduced.

HydroTap Classic Plus

The new and improved HydroTap Classic Plus delivers the convenience of instant boiling, chilled and sparkling water at the touch of a button, offering instant hydration and convenience to any workplace kitchen.

HydroCare service plans

Your drinking water system is an integral part of everyday life in your busy workplace.

Just like any crucial equipment, it's important to have peace of mind that when the time comes to change the filter, service your system or if you need us for anything else, you are back up and running as quickly as possible with minimal inconvenience. Whatever your business needs, we have a comprehensive service plan to match.

Why choose HydroCare?

Taste filter replacement and sanitisation

System replacement

Parts and labour

Safety and system check

Unlimited call outs

Annual inspection

Planned services

Priority response available

HydroCare Universal

We can offer service plans for all your drinking water systems, even non-Zip branded products. Get in touch to find out more.

HydroCare for your other Zip and Instanta drinking water systems

Maintaining all your other Zip products to ensure they operate at peak performance is one less thing to worry about with our HydroCare plans. Whether a HydroBoil or HydroChill, we have a plan designed to give you complete peace of mind. Plans cover all the requirements you would expect including servicing, sanitisation and filter change (where required).
