are net of VAT, ex-works Italy.
Blupura reserves the right to alter products
and prices at its own discretion, without notice.

Water, always ready to be dispensed into glasses, bottles or flasks, at home, in the office, in bars, restaurants, canteens, and any public space. Making all of this possible through water coolers that are on the cutting edge in terms of their construction, performance, design and respect for the environment - this is the task we set ourselves.

Drinking water is vital. Drinking water from the mains supply helps the environment – this was the start of our mission.

“Water and the resources of the Earth are the most precious assets that humanity possesses. And their future depends on the choices that we all make, both as entrepreneurs and as citizens of this planet.

Drinking water from the mains water supply, for example, is in itself an economically intelligent choice, and one that is also important for the environment, in terms of reducing the impact of plastic bottles on the ecosystem. But even if this becomes the standard way to consume drinking water, it will still not be sufficient.

When we founded Blupura, it was our conviction that we could make a difference by offering the market better, greener water coolers that gave us the impetus to pursue this adventure.

We were the first on the global market to use natural refrigerant gases to eliminate the impact of our machines on global warming.

And, using this decision to respect the environment as our launch pad, we wanted to demonstrate the same respect for all of our customers and the users of our water coolers, offering them nothing but units with unrivalled standards of construction, performance, functionality, ergonomics and design. All, naturally, made in Italy from start to finish.

Today, our water coolers dispense water in restaurants, offices, homes and public spaces throughout the world. And we have a plethora of ideas for the future...”

Piero Fubini

Fred Merzli

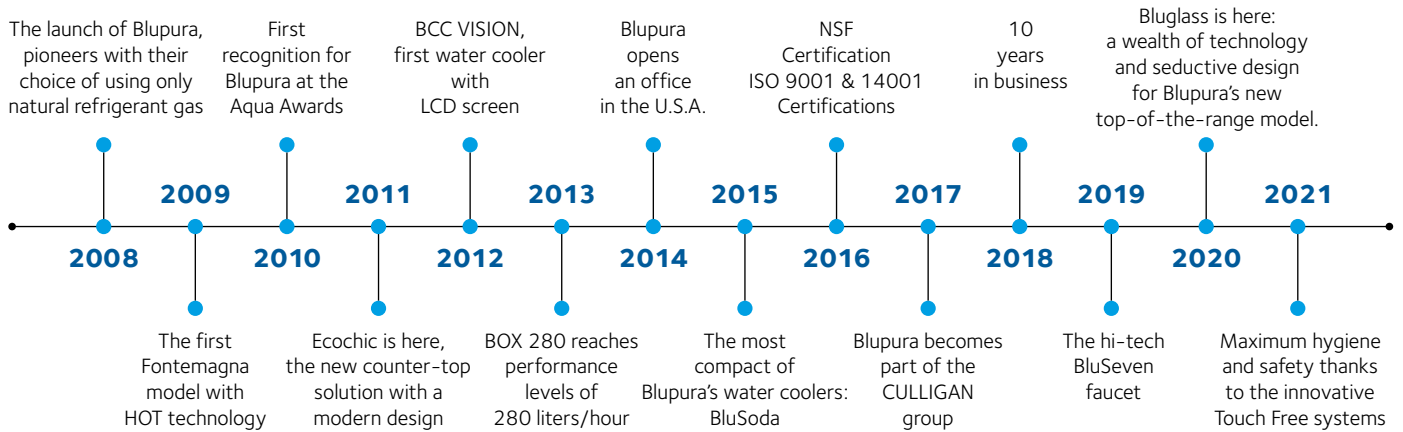

blupura
Cool, yes we are.

Pioneers in the use of natural gases,
passionate about total quality, and even
more demanding than our customers.

Blupura is the only manufacturer of water coolers to be named by Greenpeace in the latest Cool Technology Reports!

Blupura is extremely proud of being the only water cooler manufacturer to appear on Greenpeace's www.cooltechnologies.org website and in its "Cool Technologies: working without HFCs" report, which lists the companies that are leading the way, right around the world, in terms of the use of cooling technologies that do not rely on hydrofluorocarbons (HFCs), which are considered to be among the main contributors to global warming.

Certifications (see official listing)

Electrical safety certification for U.S. and Canada markets

American certification of purity and quality of the dispensed water

Compliance with European directives

System compliance to the (CE) N. 1935/2004 regulation (MOCA)

Compliance to the European directive 2011/65/JE + D.D. 2015/863/EU

American safety certification of products in food-preparation environments, with a particular focus on water

French certification that ensures the safety of materials that enter into contact with water for human consumption

WaterMark
WMK26241
WMTS 105:2016

Certification for Australia and New Zealand confirming the safety of the materials that come into contact with water for human consumption

14001:2015
UNI EN ISO
Compliance of the quality management systems

9001:2015
Compliance of the environmental management standards

Product electrical safety certification based on the technical Brazilian standards

Certification that product is 100% made in Italy

Product electrical safety certification based on the technical European standards

100% designed and manufactured in Italy.
No compromise on materials or construction quality.
First-class functionality and performance.

We really like to put our coolers to the test...

Indeed, we demand that they are the best they can possibly be, at all times, with a view to offering our customers the right cooler for every usage requirement. It is a choice that we pursue every day through a project geared towards total quality, which envisages the use of nothing but materials of the highest quality, to guarantee excellent durability and performance levels. But we also want our coolers to be beautiful, functional and ergonomic, benefitting from stylish, modern and proudly Italian design.

It is an ambitious philosophy, which requires a multi-faceted organisational approach, but one that enables us to verify the quality of the work being done, thanks to a design and manufacturing process managed in-house, meaning that our units are entirely made in Italy, from start to finish. It is a production cycle that allows us to be a reliable, versatile partner for our customers, so that we can develop exclusive, customised solutions to insert the right cooler into the right context, in order to meet any set of functional and aesthetic requirements.

Our advantages

Dispensing

Option for sparkling and slightly sparkling water, room-temperature water, cold water at 5-12 °C and, on certain models, even **hot** water up to **85 °C** to make it easy to prepare tea and infusions.

Capacity

Every BluPura unit can dispense different quantities of cold water every hour.

Materials

Stainless-steel and aluminium, but that's not all - all of the materials used are made in Italy and are of the highest quality.

Cooling

Blupura coolers feature the following professional cooling technologies: the innovative DRY COOLING, the high-performance ICE BANK and the compact BLUPURA DIRECT CHILL.

Refrigerant gases

Use of fluoride-free natural gases.

Controls

Controls with high-quality stainless-steel buttons or TOUCH SCREEN controls allow for the easy use of the PORTION CONTROL function and for effective ENERGY SAVING. Shortly, the first coolers with "IoT" (Internet of Things) technology will be available, enabling remote management via an App.

Filtration

Our units feature a number of filtering solutions, including active-carbon filters, water treatment based on the principle of osmosis, and an in-line UVC (12 W) lamp.

Anti-bacterial protection system.

In addition to the unique BLUPROTECTION treatment immediately applied after production, each Blupura water dispenser can be fitted with additional anti-bacterial protection systems such as UV-OUT lamps or NANO SILVER PIPE technology. The new TOUCH FREE and NANO SILVER PROTECTION systems protect watercoolers from possible contamination.

Cooling technology

DRY COOLING

This is an innovative, direct cooling technology that sees the water coils (made of stainless steel) and the refrigerant gas coils (made of copper) combined in a single die-cast aluminium unit.

Using Dry Cooling allows the cooler to be more compact and to deliver professional levels of performance in a home or office context.

ICE BANK

This is the most high-end professional cooling technology, which is necessary in all those hospitality industry situations in which the highest levels of performance are essential.

These levels are reliably achieved thanks to the immersion of the water coils and the refrigerant gas coils into an ice bank.

BLUPURA DIRECT CHILL

Hygienic, direct-cooling technology with large-capacity carbonator.

Hygiene, Security and Filtration

TOUCH FREE

To dispense, just position your finger 1.5 cm away from the panel and keep it there until the dispensing is complete. Removing your finger will cause the dispensing operation to be interrupted automatically.

NANO SILVER PROTECTION

The external surface is treated with Nano Silver Protection technology, which uses silver ions, and is capable of reducing bacterial proliferation by 99.999% in 24 hours.

BLUPROTECTION

At the end of the production process, the water circuits of each Blupura water cooler are filled with the BLUPROTECTION mixture in order to remove any Pseudomonas and avoid any proliferation.

UVC OUT and UVC Led OUT

There are two types of bactericidal UVC lamps, located at the outlet on each individual tap. The former use mercury vapor technology to produce ultraviolet light, the latter use LEDs, ensuring the same functions and performance.

UVC rays, as demonstrated in numerous studies, have a sterilising power and prevent bacterial proliferation by directly attacking the vital DNA of bacteria, viruses and other microorganisms.

NANO SILVER PIPE

A pipe made from AISI 316L stainless-steel, which undergoes a special, innovative, nanotechnological surface treatment based on silver ions. Surfaces treated with these nano-particles take on a more compact, smoother form. This avoids the formation of deposits, biofilms and bacterial colonies. Moreover, since the water is flowing better in the tube, the number of drips at the end of the dispensing process is reduced.

IN-LINE UV

Filtration using a UVC (12W) in-line lamp.

ACTIVE CARBON

Purifies the water, making it crystal clear, odourless and flavourless. Active carbon filters are able to capture all of the impurities up to 0.5 microns thick, eliminating all of the odours and flavours, such as those of dissolved chlorine, as well as any asbestos fibres and micro-organisms such as cryptosporidium.

Prices and technical specifications: page 85

OSMOSIS

This is a water-treatment system based on the principle of reverse osmosis, carried out in order to lower the content of nitrates and other substances dissolved in the water, which - having undergone osmosis - has a very low fixed residue.

Technology at the service of the user

TOUCH FREE: THE INNOVATIVE SYSTEM THAT ENSURES OUR MACHINES AND YOUR WATER ARE FREE FROM POSSIBLE CONTAMINATIONS.

Never before has our attention been focused on this goal, to reduce the proliferation of bacteria and viruses by 99.9%, for the safety of all.

The controls are operated by infrared or by capacitive proximity, two different, safe and versatile technologies.

The water you want, without even touching the controls!

TOUCH SCREEN FOR MAXIMUM HYGIENE!

A flat, elegant control panel: great design and unrivalled practicality for easy cleaning and maximum hygiene. The touch screen controls are all under glass and the absence of mechanical buttons allows for simple cleaning with the wipe of a sponge!

I.T. INOX TOUCH

A control panel with high-quality stainless-steel buttons is our alternative to the touch-screen controls. It is a more comfortable solution that delivers the same level of performance.

ENERGY SAVING

When desired, the unit can enter stand-by mode, reducing consumption by 75% compared to when in fully operational mode. This allows for a form of energy saving that, thanks to the maintenance of a low temperature, avoids bacterial proliferation.

PORTION CONTROL

Volumetric portioning, which enables the customisation of the amounts dispensed, makes for a convenient, rapid service.

CONVEYOR

Water coolers generate heat when operating. The Blupura conveyor, as found on the BluSoda Box 30 and 45 models, collects and expels warm air through a single opening, in line with which a hole is made in the internal base of the cabinet that houses the Box, enabling optimum heat dissipation and saving a considerable amount of space.

The conveyor is a device that can be used in the

ELECTRICAL PLUG

We have offices and distributors throughout the world to serve our customer base. It comes as no surprise, then, that every unit we produce can be made to comply with the electrical standards and plug types in use in any given territory.

Piccola

Modern design, unrivaled compactness, illuminated dispensing zone, limitless convenience. This is “Piccola”, the small-but-mighty Blupura solution for every home and office.

Attractive and incredibly compact in its dimensions, Piccola stands out for its versatility, in both aesthetic and functional terms. Available in white or black versions, to allow it to fit seamlessly into any surrounding, Piccola offers a full four dispensing options: still, slightly sparkling, sparkling cold water and room temperature water.

The Piccola **Hot** model dispenses hot water up to **85°C**, perfect for making teas and infusions. Piccola **Hot** features LED dispensing buttons with an alarm in the event of the absence of water, overflow or boiler malfunction.

Piccola is equipped with Blupura Direct Chill, an exclusive hygienic, direct-cooling technology with large-capacity carbonator.

BLU Soda

Perfect for home and office, Blusoda is attractive and compact, and delivers professional-level performance. All the water you want, how you want it, always within reach.

With its functional design and stainless-steel construction, Blusoda delivers great performance in a small space. It can dispense cold still water, cold sparkling water and room-temperature water, as well as hot water up to **85°C (Hot version)** for the preparation of teas and infusions. A safety device prevents the accidental dispensing of hot water. The range is complemented by the Blusoda PLUS 30 and MIX models, with LED buttons that function as safety alarms to indicate that the sparkling water has run out. Moreover, thanks to the mixer, Blusoda MIX supplies slightly sparkling water too.

Fitting seamlessly into any surroundings, Blusoda is available in stainless steel/black and in a "total black" version, other than the "Touch Free" model.

There are also two different cabinet designs, offering both style and functionality for the 30- and 45-liter models.

Fitted with internal brackets for the attachment of filters and CO₂ cylinders, in addition to an outlet for the drip tray.

Blusoda **Cabinet**
with optional extra: 5-liter
jug with re-fill alarm.

WAVE

- stainless STEEL
- I.T.
- touch screen
- portion control
- energy saving
- ICE BANK
- GAS R290
- 30 lt/h
- 60 lt/h

The designer, compact cooler for offices and community centres. The quality choice for those who want a stylish, versatile, powerful cooler.

All Wave models deliver cold still water, cold sparkling water and room-temperature water, along with hot water at **95°C** for the preparation of teas and infusions (**Hot** version). The quality of Wave is also evident in its safety specifications and its optional extras.

The Wave IT version has identical performance levels to WAVE but in a more practical version, thanks to touch-screen commands with high-quality stainless-steel buttons. Wave has a 27cm-tall dispensing area, but also available on request is the Wave Tall version with a 31cm-tall dispensing area.

Wave **Curved Cabinet**
Complementing the Wave range are two cabinets: the Curved Cabinet for 60-liter/hour modes, made entirely from stainless steel, with lines that match the cooler's unmistakable design, and the Standard Cabinet, which can be combined with all Wave models (see page 87).

The counter-top solution for hospitality-industry professionals – combining a captivating, elegant design with exceptional performance.

All of the Ecochic models dispense cold still water and cold sparkling water, as well as room-temperature water.

Ecochic is a stylish, characterful countertop cooler, featuring an attractive design that makes the most of the construction quality of the stainless-steel shell with an eye-catching blue Plexiglas insert. The technical specification is very much top-of-the-range: high-performance ice bank; comprehensive safety features; excellent ergonomics (both for the user and the service personnel); no compromise on materials and technical specifications.

Ecochic I.T. has practical and robust stainless-steel dispensing buttons, whereas **Ecochic “beer” tap** has manual mechanical faucets.

Cabinet Standard made entirely of stainless steel for the 80-liter/hour model only.

bluglass

The perfect blend of elegance, functionality and excellent performance, complete with cutting-edge design and technology.

Bluglass is Blupura's range of exceptionally stylish countertop water coolers that, by embodying state-of-the-art technology and design, are the perfect choice for any environment. Every Bluglass model is made from sturdy stainless steel and tempered glass, and is equipped with a professional stainless-steel carbonator. Each model delivers professional-level performance and dispenses cold still water, room-temperature water, sparkling water and hot water (in the **Hot** versions). The ergonomic design makes installation simple and rapid.

Compact, powerful and wonderfully stylish, **Bluglass 30** is the perfect model to allow you to supply plenty of high-quality water at home and in the office. **Bluglass I.T. 80** is the countertop solution: its modern, refined design is perfect for bars and restaurants, and Portion Control comes as standard. The internal parts, the cooling coils, the adjustable feet and the suspended tray are made entirely of stainless steel. For those who do not want to do without manual mechanical faucets, we have designed **Bluglass "beer" tap 80**, which enables the filling of multiple bottles at the same time.

Bluglass Plus is the top of the range model, and it encapsulates the very best in design allied to state-of-the-art technology. It is fully programmable through a 7" touch-screen interface, which can display a large number of parameters, allowing you to control the portion sizes, monitor the number of liters dispensed for each type of water, manage diagnostics and alarms, set daily schedules and program time slots for the energy-saving function...it even enables you to display informative and advertising video content in stand-by mode. In other words, it offers you everything you could need!

The best cooling technology

With a **double coil** ice-bank, the Bluglass 80 offers a superior performance as expected from a top of the range chiller

FONTEMAGNA

Fontemagna is Blupura's top-of-the-range water cooler, and is the finest encapsulation of Blupura's technology and design. It is available in numerous versions to meet every set of requirements in the catering world.

All Fontemagna models dispense cold still water and cold sparkling water, as well as room-temperature water or water at 95°C (Hot version). The standard-bearer for Blupura quality and success around the world,

Fontemagna is a high-end water cooler that is unrivalled in terms of innovative, high-tech features and solutions. Just think, for example, of the electronic interface with its touch-sensitive controls. Protected by a glass screen,

it is exceptionally easy to use and clean, thus ensuring maximum hygiene. Other features include the high-insulation ice bank, the dual cooling coil (one for still water and the other for sparkling water), and the self-diagnostic and

alarm systems. To say nothing of its fully stainless-steel construction, its industry-leading performance and its unmistakable design, which has now become an iconic part of the brand.

FONTEMAGNA VENDING

The professional “crossover” solution between a water cooler and a water vending machine.

ELECTRONIC DISPLAY CONTROL PANEL, CARD READER WITH RFID SYSTEM

A microprocessor controls the dispensing system, the unit status and the number of liters dispensed, indicating the type of water selected and its availability. The user interface is extremely simple, clear and functional.

LOW-VOLTAGE VANDAL-RESISTANT BUTTONS

The high-quality steel buttons for the selection of cold still water or cold sparkling water are programmable to control the dispensing of a specific quantity of water.

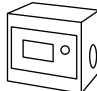

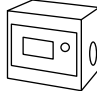

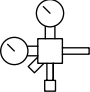

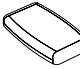

- Functionality with customizable RFID cards.
- Dispenses 150 liters/hour of cold still and cold sparkling water.
- Single dispenser.
- R290 natural refrigerant.

FONTEMAGNA COMPACT

- stainless STEEL
- aluminum
- I.T.
- touch screen
- portion control
- energy saving
- ICE BANK
- GAS R290
- 80 lt/h
- 150 lt/h

A combination of Power and Technology, all the advantages of Fontemagna in a compact countertop model. Space saving without compromise!

Fontemagna Compact is available in an I.T. version and a version with touch screen controls. Despite its small footprint, it boasts the following features:

- Just 59 cm deep, including the drip tray (also available with an outlet, on request).
- Convenient opening from above
- Internal space to house the filter cartridge
- Portion Control comes as standard on all models, whereas the water pressure reducer comes as standard only on the 150Lt/h versions.

HYDRAZON

Having a source of good drinking water in your workplace is not a matter of comfort, but of hydration and well-being. Hydrazon's design and performance are the answer.

Essential and elegant, to fit in with style in any type of environment. Smart design, to offer the internal space to contain the desired filtration (reverse osmosis - only for non-FIZZ - or activated carbon models).

Efficient in performance and simple in functions, to deliver up to 4 different types of water. HYDRAZON is the perfect solution for every office and workplace.

The options include:

- Integrated cup dispenser.
- Extra space for CO₂ cylinder up to 6 kg.

Hydrazon RO

Inside the RO model are the reverse osmosis membranes: the semipermeable membranes block the impurities dissolved in the water, reducing the content of the minerals contained. The water, once osmotic, will therefore retain a very low fixed residue.

Hydrazon

BCC vision
BroadCasting Cooler

The cooler with audiovisual screen for information and advertising ... it's perfect for gyms and large offices.

Fitted with either 1 or 3 stainless-steel buttons, it can dispense either just one type of cold water or three different types (cold still, cold sparkling and room temperature).

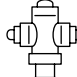

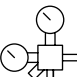

Fitted with stainless-steel buttons (VANDAL-RESISTANT IP65) it is entirely constructed from stainless steel with stain-resistant treatment. Comes with remote control for the supplied monitor.

Every Blupura undercounter cooler can be complemented by original Blupura dispensing heads, all of which feature stylish designs, top-quality construction and exceptional performance or by mechanical taps.

All the power for every requirement! Everything you could ever need... The Blupura BOX is an understated, functional presence within the units of any kitchen or in the coffee-break area of any office.

This intelligent, space-saving solution leaves visible only the dispensing point and can be combined with any type of tap.

All of the BOX models stand out thanks to the following features:

- Interior easy to inspect.
- Made entirely from stainless steel.

- Professional, stainless-steel carbonator.
- Pump protection system in the absence of the water supply.

BLU Tower

A professional faucet for those who love design but have limited space available. The perfect combination of style and performance.

Complete with portion control and made entirely from stainless steel (including the buttons), it can be combined with any type of undercounter model.

It dispenses two types of water: cold still and cold sparkling, or cold still and room-temperature still.

BLUTOWER is also available with three dispensing buttons in the MIX version (cold, semi-sparkling and sparkling water) and the **HOT** version (cold still, cold sparkling and hot water).

Optional extras include:

- Drip tray

FONTEMAGNA BRIDGE

The revolutionary supply head that can be fitted to all under-counter models, combining practicality and efficiency.

Fontemagna Bridge is the choice for those who want high performance in the smallest possible space. Connected to the under-counter box, which can also be installed in another space, it offers the same features as a large floor-standing cooler: portion control, anti-bacterial UV lamp at the outlet of each faucet, multiple dispensing. Entirely made of aluminum and stainless steel, it has protected 3-way faucets. The drip-tray is included.

Fontemagna Bridge I.T. with stainless-steel buttons.

Fontemagna Bridge touch screen version.

TOP CONTROL

The sleekest countertop dispenser, made from stainless steel and featuring a touch screen and dual, dispensing outlets!

Smaller footprint, greater functionality: a valid new alternative to replace traditional, manual "beer-style" taps on the counter. Convenience and design for a product that comes complete with a drip tray.

With Portion Control, you can automatically fill up two bottles at once, saving time and lowering cost. The entire electronic section is fitted within a box for positioning under the counter.

Blupura Filters					
					
	Blupura Sediment Filter	Blupura Carbon Block Filter	Blupura RO 50 GDP Filter	Blupura RO GAC 1/4 Postfilter	Blupura Filter Head
	Designed to be combined with reverse osmosis systems to supply filtered water from suspended solid elements, such as grime, sand or rust.	The Carbon Block finds convenient application in all cases where it is necessary to improve the chemical and organoleptic characteristics of drinking water.	The osmotic membrane RO 50 GPD reduces the TDS and the unwanted substances such as: Arsenic V, Barium, Cadmium, Cyst, Chromium IV, Chromium III, Copper, Fluoride, Radium 226/228, Nitrate/Nitrite.	The RO GAC ¼ granulated activated carbon post filter (GAC) is convenient to apply in all cases where it is necessary to improve the chemical and organoleptic characteristics of the water. The filter eliminates any residual flavors and odors just before the water dispensed through the tap.	The Blupura filter head is designed to be used with all Blupura filters.

Dimensions
A x ØB x ØC
(mm) **248 x 70 x 26**

Combined with **Fontemagna I.T. 150**

Price
€ **17,36**

Filter cartridge with block of vegetable origin extruded activated carbon, for the filtration of fine sediments, including a number of microorganisms, and the elimination of odors and flavors due to chlorine (CTO) and other volatile organic compounds (VOC) and heavy metals.

Technical uses: Pre-treatment for the protection of reverse osmosis membranes.

Cartridge materials:
polypropylene

Osmotic Membrane HORECA

Capacity **2-3 anni**

Permeate flow **840 GDP**

Applied pressure **4,8 bar**

Max working temperature **25°C**

Nominal membrane area **3,2 m²**

Dimensions
A x Ø (mm) **640 x 118**

Combined with **Fontemagna I.T. 150**

Price
€ **990,00**

The membrane removes more than 97% of particles present in the water, including residual chemicals (such as copper, lead, mercury, sodium, etc.), to make the water practically pure.

Configuration:
coil membrane

Membrane polymer:
polyamide composite

Salt water separator material:
polypropylene

Sanitising and cleaning

SanBasic	
	Concentrated solution of 30% hydrogen peroxide. It amplifies the detergent capacity, facilitating the removal of the most stubborn residues, such as grease. It controls a wide variety of bacteria, yeasts and fungi. Pack: 1 Lt
Price €	18,00

SanMedium	
	Based on Poly Hydrochloride, SanMedium has a broad spectrum oxidant antibacterial action. Recommended for more effective sanitisation in case of bacterial proliferation. Pack: 1 Lt
Price €	45,00

Creamy Cleaner	
	Cream based on detergents and emollients assisted by non-abrasive micro-granules and free from acids. Removes rust, salt residues, oil and grease deposits. Pack: 1 Lt
Price €	39,00

Sanitising cartridge	
	Empty Everpure cartridge with quick coupling to be used with the sanitising liquid selected to sanitise the system.
Price €	70,00

Daily Cleaner spray	
	Brilliant cleaner for the daily maintenance of sinks, taps and stainless steel panels. Useful for the removal of limescale. Pack: 1 Lt
Price €	15,00

BluSteel	
	30x50 cm microfibre cloth, for perfect external cleaning of steel.
Price €	10,00

Pump kit for sanitation	
	Pump kit for sanitation of the hydraulic circuits of water coolers and descaling systems with hot water
Price €	260,00

Cups and box

Blupura cup	
	Quantity 1000 pcs
	Material Recyclable Paper
	Dimensions A x ØA x ØB (mm) 83x70x50
Price €	160,00

Ecological cups in recyclable paper with a diameter of 7 cm, perfect for the BLU2GO automated dispensing system.

Wooden Box	
	Material Wood
	Maximum capacity 12 bottles*
	Dimensions W x D x H (mm) 380 x 268 x 320
	The eco-friendly bottle-holder with an exclusive design with Blupura or neutral logo.

Warranty terms

Blupura Srl Blupura Srl guarantees that, prior to their shipment, its refrigeration and carbonation units are subject to rigorous checks that ensure the units comply with the highest standards of quality and are free from defects in terms of their materials and construction. Blupura Srl undertakes to repair, free of charge, the units at its plant and/or to replace any components that demonstrate manufacturing defects for a period of 24 (twenty-four) months from the date on which the relevant invoice is issued to the retailer; the retailer provides the legal warranty to the consumer. Blupura Srl shall not reimburse the costs of work incurred by the purchaser for repairs to the units. Blupura Srl must be informed of the presence of defects within 8 (eight) days of their detection; beyond this time limit, the warranty conditions shall not be applicable.

The warranty does not cover those parts subject to wear-and-tear under normal conditions of use or damaged as a result of neglect. The warranty is not applicable to any units that have been subject to tampering or deterioration for reasons not attributable to Blupura Srl; nor does it cover any units that are used for applications that are incompatible with or contrary to the usage limits prescribed by the regulations and/or shown on our technical documentation. Since the installation, associated operations, electrical connections and commissioning of the units are carried out by the installer, the warranty provided by Blupura Srl concerns only the individual units sold and not the complete installation or system. Any modification made to the original product as sold by Blupura Srl or any installation not envisaged in the enclosed manual shall automatically result in the withdrawal of any approval marks, the certifications and the warranty itself provided by Blupura Srl, which, consequently, shall accept no liability in relation to any products that have been subject to modifications or installations not envisaged by the manual.

Blupura Srl accepts no liability for any damages that may, directly or indirectly, be caused to third parties as a result of failure to comply with the instructions provided in the appropriate user manual and relating in particular to the installation, use and maintenance of the product.

This warranty absorbs and replaces all other warranties and liabilities, both contractual and noncontractual, pursuant to the applicable laws in relation to the products supplied, with the express exclusion of any liability on the part of Blupura Srl in relation to indirect, incidental or consequential damages that may arise from faults or from the defective and/or non-compliant nature of the product supplied.

RETURNS AND REPAIRS - In order to use the returns and repair service, please contact Customer Service and request a return merchandise authorisation (RMA), which must be enclosed with the shipment. The Customer Service team will supply authorisation for the return of the goods. If you are not a direct customer, the product return must be carried out via the retailer.

The retailer is liable for the cost of shipping the goods back to Blupura Srl. For repairs carried out under warranty only, Blupura Srl shall be liable for the cost of the return shipment on completion of the repairs. For repairs not carried out within the warranty period, the standard payment terms shall apply as defined in the contractual conditions of sale upon issuing of the invoice. Units returned for repair outwith the warranty period shall be covered by a 12 (twelve) month warranty, applicable only to the replaced and/or repaired components, starting from the date of repair. The repair of units under warranty does not connote in any case the extension of the warranty beyond the 24 (twenty-four) month limit.
