

PORPOISE

The shallowest
surface-mounted
anti-ligature
drinking water tap
in the world.

Distinctive
by design.

The Porpoise is a ligature-resistant drinking water tap for modern mental health, custodial and vandalism-prone environments.

With the Porpoise, Borg & Overstrom brings 20 years of experience in manufacturing exceptional drinking water dispensers to the crucial field of mental health. If you're looking for safety and consumer care, look no further. You can have full confidence in the expertise which made this the premium product for use in challenging environments.

Distinctive
by design.

Solid, smooth, seamless
- built to last, safe to use,
easy to clean

Why Porpoise?

It's not just about the aesthetic of a namesake, but the purpose. Porpoises are sociable, intelligent, friendly and adaptable; able to prosper in both hot and cold climates.

The Porpoise drinking water tap wasn't only named for its look but its function as an advanced, user-friendly product with the inbuilt versatility to operate with hot or cold temperatures.

Distinctive
by design.

The Porpoise solves unique challenges

Only 67mm high - a world-first design

Distinctive by design.

Minimise ligature risk.

Safe for vulnerable people to use, even unsupervised. Reduced oversight means more user autonomy.

Prevent self-harm.

Non-mechanical touch-sensitive control panel and an integral faucet means no detachable small parts, minimising the risk of misuse such as self-harm.

Reduce the spread of infection.

The touchpanel has an antimicrobial coating, which helps prevent bacteria buildup, while the seamless construction reduces the labour required for cleaning and maintenance.

Create environments that last.

The tap's single-case design is robust and vandal-proof - perfect for long-term use in challenging applications.

Set the water temperature to suit the environment.

Both hot and chilled water can be preset to the temperature that best suits your application.

Save space without compromising on performance.

Powered by ProCore®. This compact, self-ventilating undercounter processor, offers high output performance at minimal storage space.

Provide complete protection against germs.

Totality® is our six-stage assurance that water dispensed from a Borg & Overström water dispenser is as safe as it is refreshing.

Save on energy bills.

Our proprietary DryChill® sealed cooling system enables faster cooling and recovery times with minimal waste, while protecting against bacteria contamination.

Choose an extra layer of purity.

Viovandi™ LED-UV filtration is a mercury-free, chemical-free and maintenance-free water purification system that inactivates harmful microorganisms present in the water.

Minimise hot tank maintenance.

High-quality 3M Scaleguard carbon filters maximise the life of the hot tank and provide the highest level of water hygiene.

Experience high reliability and availability.

Designed and manufactured in the UK. Our commitment to nearshoring means we have a reliable supply chain and total control over product quality.

Get support when you need it.

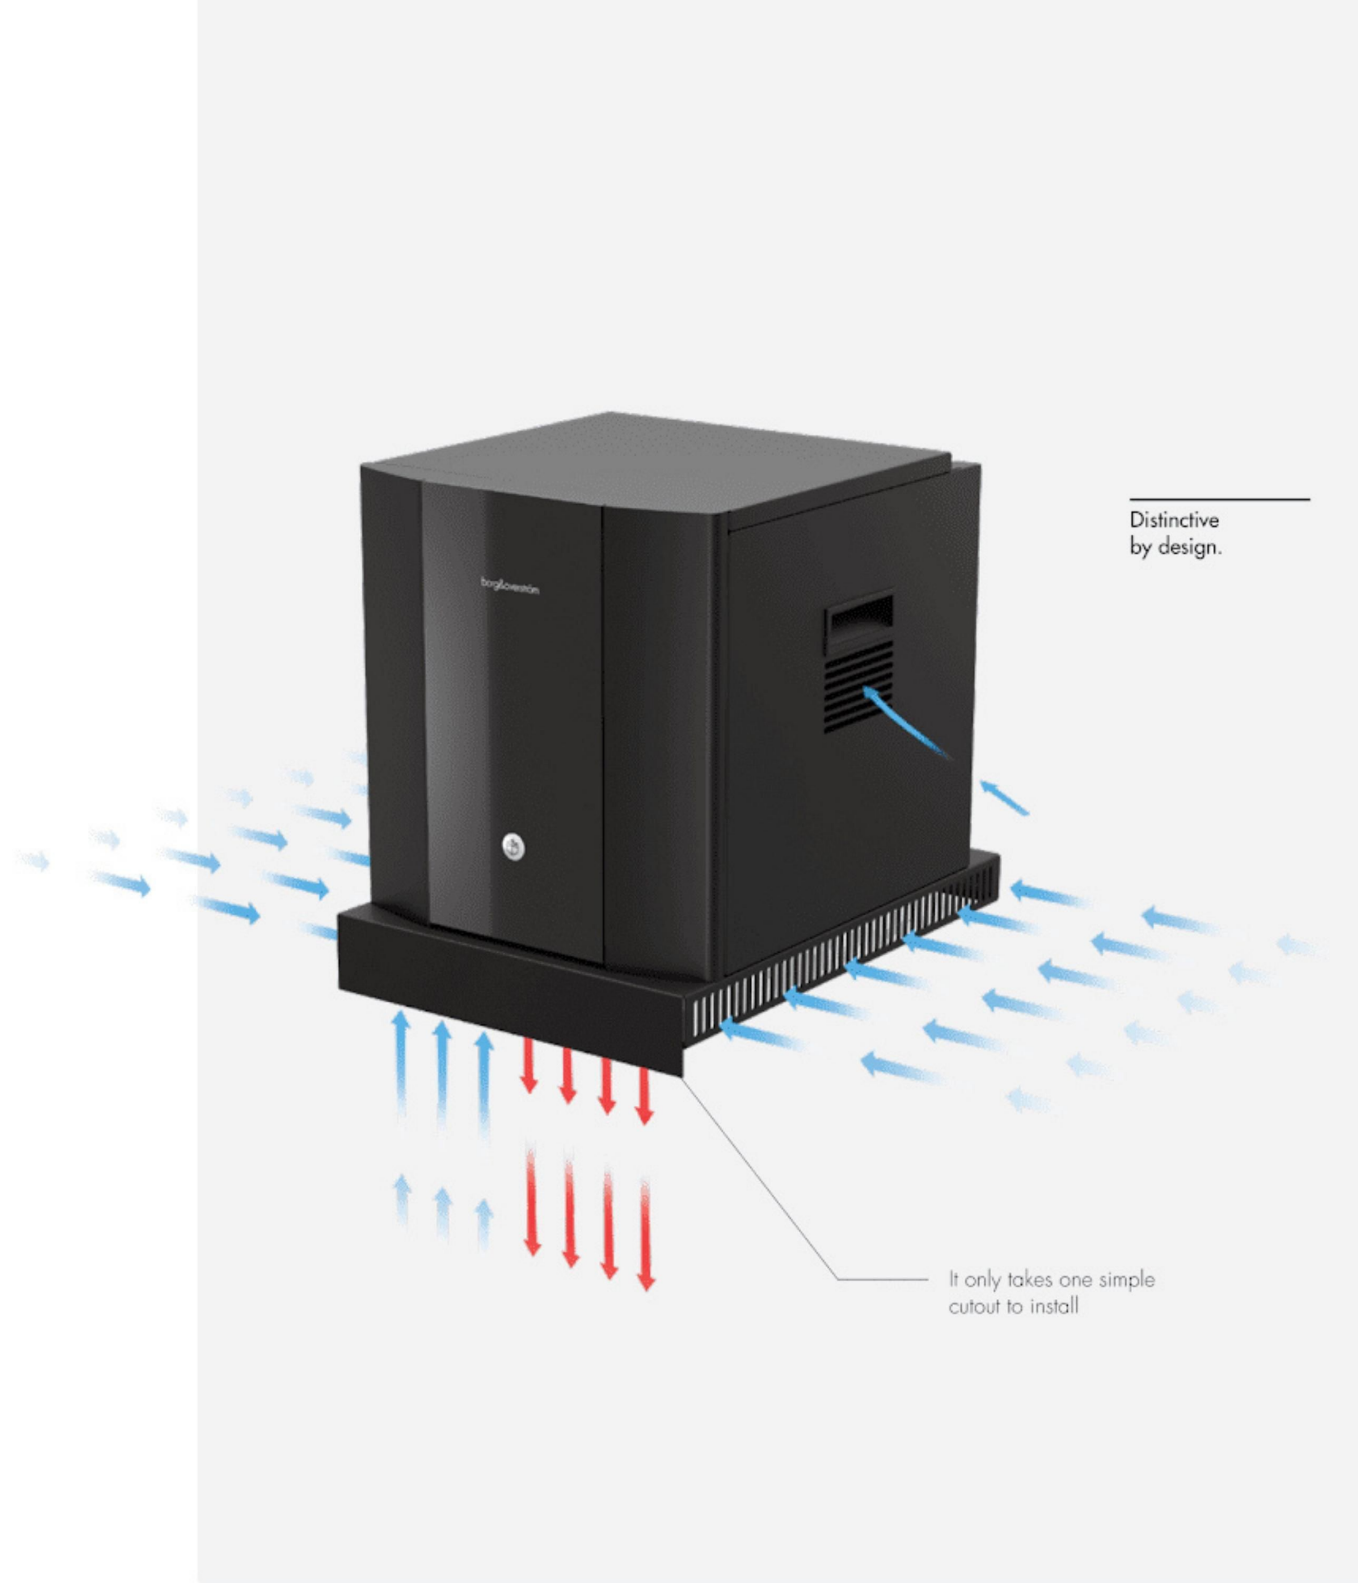

Our technical team are always on hand for your installation and maintenance needs and can secure next-day delivery for backup parts.

Compact performance

The ProCore® is our proprietary compact processor for integrated tap systems. Its purpose is to provide world-class performance whilst remaining eco-friendly and leading the way in compactness and energy efficiency. Choose ProCore+® for increased dispense speed and output.

Installation simplicity

You'll also be amazed at the ease of installation; it's a true 'plug and play' phenomenon with simple push-fit plumbing fittings and USB electrical connections. The unit's Simple-fit Vent Kit is unlike any else on the market as it eliminates the need for extractor fans: all you need is just one straightforward cut-out.

Prioritise purity with proper filtration

You can benefit from our collaboration with renowned global innovation brand, 3M; industry-leading filter providers. The quality and care they bring to their products align with our vision for an excellent experience. A 3M filter ensures:

- Superior filtration of sediment and chlorine
- Odour prevention
- Scaleguard – scale protection for hot water dispensers

Quick and easy to fit and highly effective in operation, 3M provides the highest levels of water hygiene security for your Porpoise tap.

Specification

Dispense options:
Controlled Chilled & Hot

Power requirements:
Hertz 50/Volts 230-240

Water system:
DryChill®

Chilled temperature:
2°C-12°C

Hot temperature:
30°C-70°C

Throughput flow rate:
50 litres per hour (LPH)

ProCore® chilled & hot capacity:
50 litres per hour (LPH)

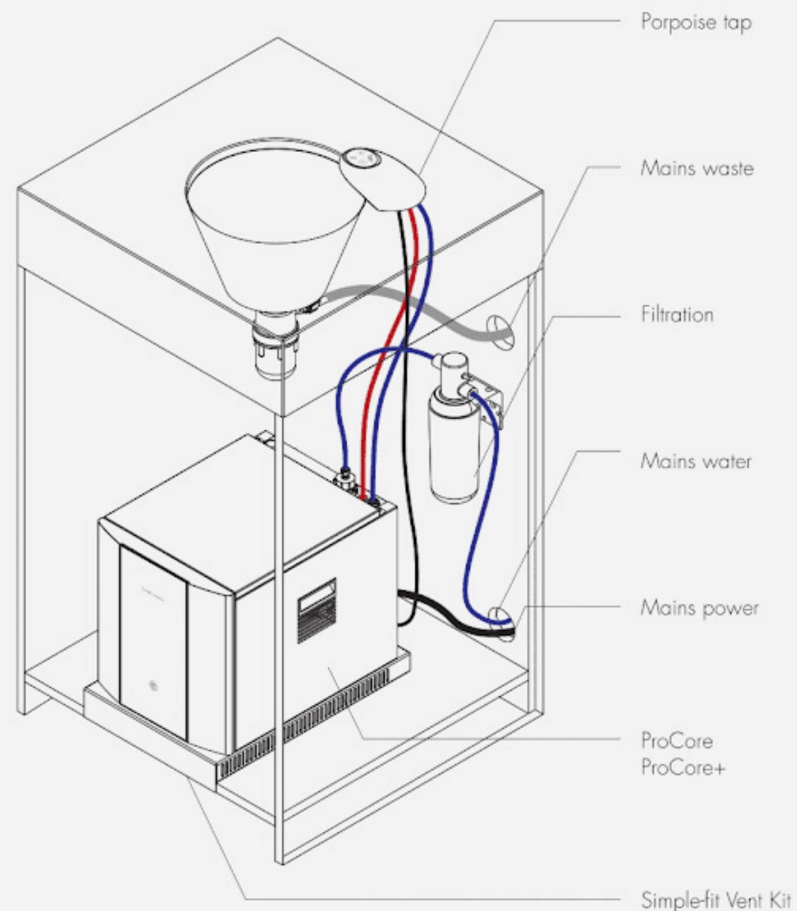

ProCore®+ chilled & hot capacity:
80 litres per hour (LPH)

Hot tank capacity:
2 litres

Hot tank element type:
Incoloy 1.5kW

ProCore® dimensions:
W320xD375xH350mm

Tap finishes:
brushed stainless steel
or black anodised

Porpoise truly reflects the Borg & Overström vision - to inspire the everyday with original design and thoughtful innovation.
