Instructions

1. Clean the surface thoroughly with WOCA Exterior Cleaner and let it dry for at least 8 hours until the surface is completely dry. In case of grain rising, we would advise the surface is de-nibed (remove any sanding dust from the surface).
2. Spread a suitable layer of gel in an even thin coat with a polishing pad (white, beige or red).
3. Continue polishing until the wood appears saturated and the surface looks uniform. We recommend working in sections as the gel dries quickly.
4. Wipe off any excess gel from the polished surface carefully with a dry lint-free cloth before continuing to next area. The surface should not appear wet and there should not be any excess gel left on the surface after polishing.
5. In case the wood does not seem completely saturated after 4-6 hours, we recommend re-polishing with a smaller quantity gel than by first treatment, but same procedure. Leave the wood surface to dry for 4-6 hours, thereafter it may be used cautiously. If possible, do not expose the surface to water during the first 2-3 days.
