

Tips to measure your feet

Instructions A. Print and measure (no printer? Go to instructions B)

Take these printed instructions, making sure the print scale is 100%. You can check that the proportions are correct by superimposing a credit card on the template we have drawn on the next page.

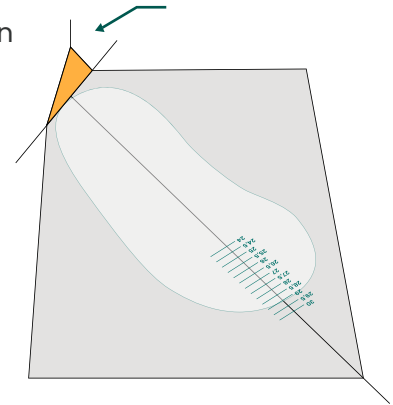

Step 1

Wear a pair of socks that you usually use.

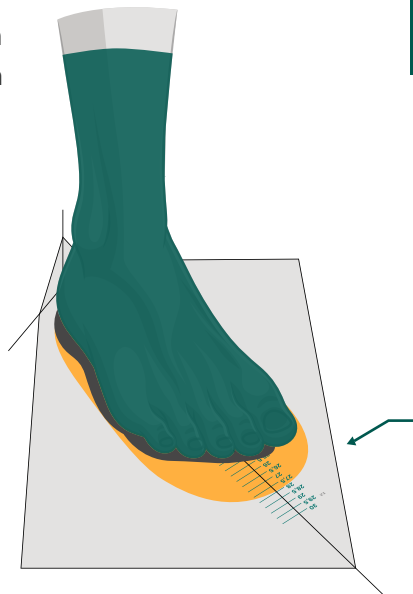

Step 2

Fold the sheet and place it on a flat surface.

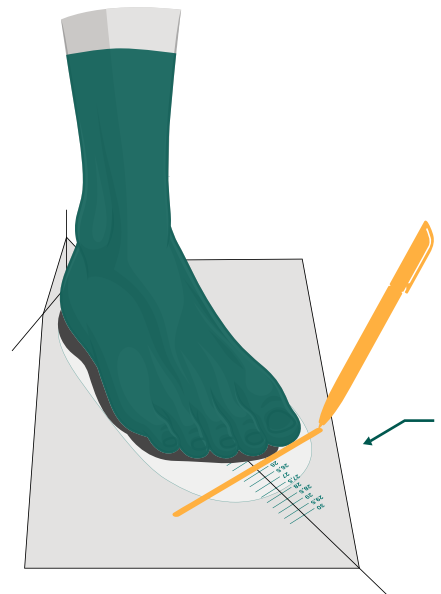

Step 3

Place your foot on the template, with your heel right on the dotted line.

Step 4

Mark the size of your foot on the sheet.

* Measure both feet: you might get two different values, so consider the larger size. Relax your foot: you will get a more accurate measurement.

**Place your card or
license here!**

Try it! Here is where you can do
the proportion test: if the
borders of your credit card or
licence match, it means that
you have printed correctly.

Tips to measure your feet

Instructions B.

Take a pencil, ruler and a blank sheet of paper. Then follow these simple instructions:

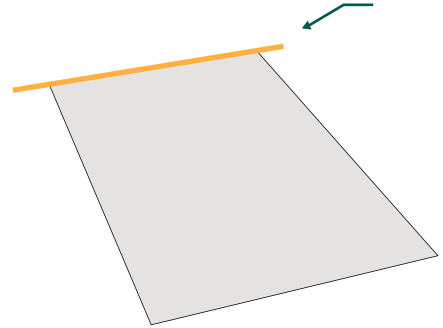

Step 1

Wear a pair of socks that you usually use.

Step 2

Place the sheet on the floor or on a flat surface. Better if against the wall.

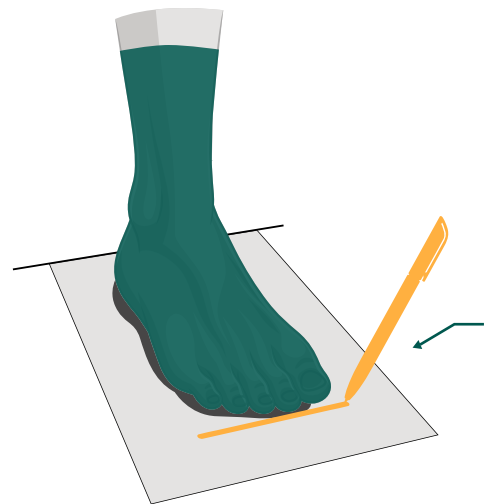

Step 3

Place your foot on the sheet, keeping your heel close to the wall.

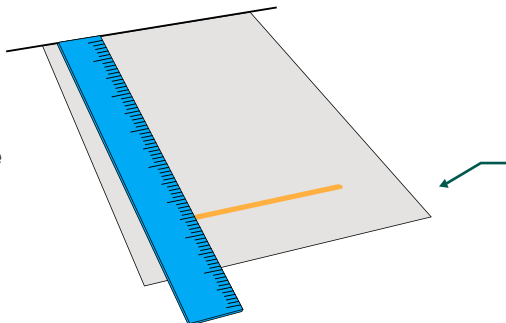

Step 4

Mark the length of your foot on the sheet.

Step 5

Remove your foot and measure the length from the heel to the toe mark.

* Measure both feet: you might get two different values, so consider the larger size. Relax your foot: you will get a more accurate measurement.
