

PRODUCT DETAILS

Food2soil is your year-round soil and plant booster. Full of *live* bacteria and fungi as well as nutrients and minerals for your plants and soil.

Similar to the human gut, soil needs beneficial microbes to function at its best. We use the ancient practice of fermentation to transform food waste into a nutritious probiotic tonic, like kombucha, but for plants and soil. Plants grown in healthy soil are proven to be more resistant to pests, diseases, heat stress and frost.

Food2Soil diverts food waste from landfill, returns food nutrients back to earth and helps build healthy soil now and for future generations.

How to use:

This bottle contains 2Lts of concentrated solution. Shake well before use. Mix with water (rain, unchlorinated water is preferred) using the following ratio 1:100 (100ml in a 10L bucket). This will cover 6m². Apply monthly or at least once per growing season. Best applied in the cooler parts of the day. Use diluted product within 2 days.

Storage and safety:

Store upright in a cool, dry place, away from direct sunlight. Best used within 12 months of purchase. Food2Soil is a natural product, therefore some sediment may occur. The cap is fitted with a venting system to allow gases from microbial activity to escape. Undiluted Food2Soil has a low pH (3.5-4), avoid inhalation and contact with skin and eyes. If undiluted solution gets in eyes, rinse immediately. Wearing a mask and gloves is recommended.

Safe for pets and wildlife.

Not for human consumption.
