

ALUMAWELD™ DRIFT BOATS

1999^{1/2}

PRODUCT HIGHLIGHTS

- ♦ **Four Models Tailored to the Way You Like to Fish.** Choose from the 290 pound Adventurer that's ideal for rough launches and situations where weight is a concern, the Guide Classic where maneuverability and quick turns are a necessity, or two Pro Guide models that are ideal for backtrolling and casting applications where stability and rowing ease are vital.
- ♦ **Experience.** Alumaweld innovated the welded aluminum drift boat in 1971 and continues to set the standards that drift boats are measured by.
- ♦ **"Signature Touches."** You can customize your Drift Boat easily with Alumaweld's complete options list. Everything from Rocky Mountain Flyfishing Packages, seating, and Deluxe Fishing Packages, to 6061 bottoms, fish boxes, and a range of oar choices are represented.
- ♦ **Brand Identity.** Because Alumaweld Drift Boats have been around longer, and are represented by more dealers, they're also the most well known drift boat built. This means when you're ready to sell your drift boat, your resale value will be higher and the sale will be made more quickly than comparable brands of boats.
- ♦ **Construction.** Alumaweld Drift Boats feature continuous welds in all critical stress areas, as well as slotted gunnel, bow, and chine extrusions for uncompromised strength and construction consistency.
- ♦ **Adjustable Seating Packages.** Every Alumaweld Drift Boat provides complete adjustment of both the rowing seat and passenger seat to optimize the boat's balance and rowing characteristics.
