Measuring for a Drapery Arm with an L-Shaped Bracket

Decide where the bracket for the drapery arm will be fixed. Standard bracket back plate dimensions can be adjusted on request.

The diagrams below show how to measure depending on whether the arm is to be face fixed or side fixed. The diagrams show arms fixed on the left hand side. Please select the correct fixing when you order and give the measurement in cm. Arms over 110cm need the support of the optional door or wall support bracket.
