

AMERICAN MADE TERP TECHNOLOGY

We put together this info sheet to help you make the most of your new Rosin Roller™.

When you get your machine, plug it into regular household current and let the rollers start to heat up. To adjust your temperature, simply press and hold the up or down arrows. Set temperature will rise or fall, once you've reached your desired temp, release the arrow and the current temp will once again show on the controller. It takes approximately 15 minutes for the machine to reach temp.

### 1 FILLING YOUR BAGS

We recommend using our SHO Industries bags as they are sized to fit Rosin Roller™. For best results, completely fill the bag so that the rollers have an even amount passing through. See the chart below for recommended weights based on the bag size used:

1.25 x 4.5

Flower: 4 grams

Hash: 7 grams

1.75 x 4.5

Flower: 6 grams

Hash: 9 grams

### 2 PRE PRESSING

We highly recommend that you pre press your bags after packing. This will ensure the material is evenly spread out in the bag, which allows for even heat and pressure to be applied while processing.

### 3 FEEDING YOUR BAGS

Once loaded and pre pressed, bags should be fed horizontally into the front of Rosin Roller™. This will allow oil to travel the shortest distance to get to the outside of the bag while passing through the rollers.

### 4 TIME

Rosin Roller™ allows the operator to have complete control over the time the material is passing through the machine. Depending on your desired results, we recommend letting the material spend 30 - 180 seconds passing through the machine.

### 5 WRAP UP

Once the bag is completely through the rollers, it will exit from the back of the unit. Continue to rotate the handle until the bag and parchment paper has fully passed through. We recommend putting the parchment paper directly into a freezer for best results.
