

Instructions for use

Gymnastic rings and similar products.

1. It is very important that the rings are adjusted so the size of the loop formed between the two ropes does not make passing of the user's head or body possible, as this will generate a risk of choking.
2. Please do not modify the product or the assembly details in any way. Modifications will affect the structural integrity and replacement parts will be at the buyer's expense. Inappropriate use or faulty application of the product are explicitly forbidden and absolve the manufacturer of all liability. This product needs to be mounted by an adult before use.
3. The use of the item is allowed only under continuous supervision by an adult. The product is suitable for individuals weighing up to 100 kg. The product is not suitable for children under 36 months, due to a lack of extra safety precautions and taking into account the limited mental capacities of toddlers.
4. This product is only suitable for family domestic use, both indoors and outdoors.
5. When installing the product, ensure that the play system or other construction can support the weight (minimum 200 kg) and that there is no risk of entrapment.
6. The product should be at a distance of at least 2 m from all other installations e.g. fences, branches, clothes-line, etc.
7. In this safety area no hard, angular or pointed objects should be present. The surface underneath the product should be flat and shock absorbing. The product must not be placed on asphalt, concrete or any other hard surface. We advise the removal and storage of all accessories during the winter because the characteristics of the soil (when frozen) are not suitable for safe play.
8. The minimum distance from the bottom of the rings to the ground surface shall not be less than 35 cm. The minimum lateral free space should be 45 cm.
9. Specific instructions for adjusting the rope length: see FIG II.
10. All pieces should be checked regularly. For replacement material and expansion of the playground equipment, please contact the supplier. Consequently, safety will be guaranteed.
11. This product can only be used in combination with sufficiently strong swing hooks with a nylon bearing. Only in this case the safety can be ensured. It is explicitly forbidden to use the metal rings on a suspension system without a hinged element.
- 12: Please keep this instruction sheet safely for future reference.

FIG II

assembly of the ropes
montage van de touwen
montage des cordes
Montage der Seile
montaje de las cuerdas
montaggio delle corde
montáž lín

INSPECTION AND MAINTENANCE

The frequency of inspection and maintenance will vary with the type of equipment or materials used or other factors (e.g. heavy use, levels of vandalism, coastal location, air pollution, age of equipment, etc). Special attention should be given to the swing hooks, rings, eights, plastic welds and ropes. Moving metal parts must be oiled regularly.

Routine visual inspection (weekly to monthly)

- Always check that the bolts and nuts are securely fastened.
- Check the shock absorbing surface for objects that don't belong there.
- Check for missing parts.
- Check the equipment ground clearances.

Operational inspection (1 to 3 months)

- Check the stability of the construction.
- Check every part for excessive wear and replace when necessary.

Annual inspection (1 to 2 times per year)

- Check for rust and corrosion.
- Check every part for excessive wear and replace when necessary.

WARNING!

For family domestic use only. Not suitable for children under 3 years. To be used under the direct supervision of an adult. Long
