

Aqua-Deck PVC Edging Guide

Tools & Materials

- Cutting Board
- Safety Utility Knife

The edge Pieces supplied are universal meaning they come pre-fitted with both male and female attachments and the corner pieces.

Each edge piece has an attached corner piece that can be trimmed to allow for continuous straight runs of edging.

This can be achieved using a sharp Safety Utility Knife as demonstrated in figure 1.

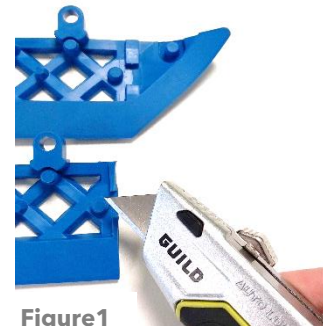

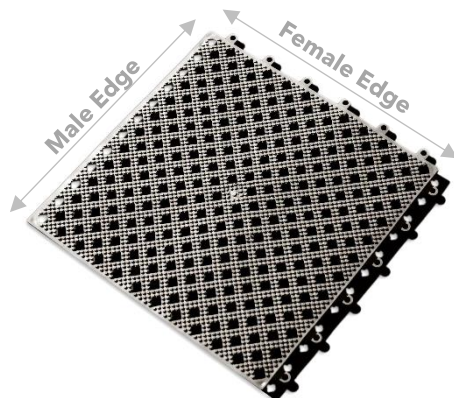

Figure1

The tiles come with two Male type edges and Two Female type edges. Therefore, If you are connecting an Edge piece to a Female edge then you would need to cut off the connectors on the tile piece. As demonstrated in figure 2.

***If you are connecting an Edge Piece to a Male edge then please skip this step**

Please note - That when cutting off the connectors from the edge piece it is important not to cut of the Peg that is directly behind the connectors, as this is what will be used to connect the Edge Piece onto the Female edge.

Figure2.

Figure 3.

Once all the connectors have been cut off as demonstrated in Figure 3, The piece is then ready to be connected.

To connect the pieces simply join up the Male Pegs to the existing female connectors and push in place.

As seen in Figure 4.
