OSSIX PLUS[®] is a biodegradable collagen membrane, obtained by standardized and controlled manufacturing procedures. Health Canada and FDA cleared, CE marked.

OSSIX GRAFT[™] is a particulate allograft; donor assessment and tissue processing is performed by a USA tissue bank registered with FDA and Health Canada.

OSSIX VOLUMAX[®] is a biodegradable collagen scaffold, obtained by standardized and controlled manufacturing procedures. FDA cleared, CE marked, Health Canada pending approval.

A Trusted Partner In Your Practice

OSSIX[®] products provide proven results to facilitate quality bone

HesiraMed.com

OSSIX™ GRAFT Benefits

- **Allograft** with **high biocompatibility** with no evidence of an inflammatory reaction
- Applicable for socket preservations, ridge augmentations and regeneration of defects
- Osteoinductive, supports fibroblast penetration and tissue remodeling
- Provides safe and reliable regeneration in conjunction with a **barrier membrane**
- **Allowash® technology** and low dose irradiation retains structural integrity of the bone

OSSIX™ GRAFT

	Volume		
Cortical	0.5cc	1 cc	2cc
Cortical/Cancellous	0.5cc	1 cc	2cc
Cancellous	0.5cc	1 cc	2cc

OSSIX® PLUS Benefits

- Unique **GLYMATRIX® technology** provides a **ribose cross-linked** scaffold for osteoblast penetration
- Acts as a barrier against cell encroachment and is consistently visible up to **6 months**
- Studies demonstrate ability to **ossify**, forming **new bone**
- Resistance to degradation when exposed for up to 3-5 weeks
- **Highly biocompatible** porcine collagen membrane

OSSIX® PLUS

Used in hundreds of thousands of cases and more than 100 peer-reviewed publications resulting from over a decade of clinical experience

OSSIX® PLUS
available in 3 sizes:
15x25, 25x30, 30x40mm

OSSIX® VOLUMAX Benefits*

- **GLYMATRIX® technology** allows for exceptional biocompatibility with a high number of **ribose cross-linkages**
- Multilayer technology creates a **3D scaffold** for osteoblast penetration
- The thickness of the scaffold helps achieve the desired volume of bone
- **Will ossify, adding bone to the buccal wall**, no fixation required
- Resistance to degradation when exposed
- Can be placed with bone grafting materials or as a **stand-alone** in contact with native bone

OSSIX® VOLUMAX
available in 4 sizes:
10x12.5, 10x40, 15x25, 25x30mm

Handling Characteristics

- Pliable and adapts well to surface contours
- Hydrates quickly
- Double sided, either side can be used
- No package memory allows easy suturing of soft tissue over the membrane
- Does not stick to itself or to instruments
