PB2100: Mobile Power Bank

How to charge your devices

Connect the USB cable to your device in the normal way and the other end to the USB port on the power bank.

The power bank will automatically turn on and start charging your device. When you disconnect your device the power bank will automatically turn off after a short period. All 4 LED lights will be on whilst a device is connected to the power bank.

The Smart IC detects the device and charges with the correct current.

How to charge the power bank

4 LED lights show the current battery capacity; just shake the power bank and it will show the current capacity.

To charge the power bank connect a USB cable into the micro USB port on the power bank; connect the other end to your charger (USB hub, USB power socket, computer port). The charging time will depend on the current of the charger, for the quickest charging time use a 2.1A charging output such as a Watts Clever USB charging hub.

Computer USB ports are normally much slower.

The LED lights will flash whilst the power bank is charged and all lights will be on when it is fully charged.
