PB2500: 3 Port Mobile Power Bank

How to charge your devices

Connect the USB cable to your device in the normal way and the other end to one of the USB ports on the power bank.

Press the power button on the power bank to turn on and start charging your device. When you disconnect your device the power bank will automatically turn off after a short period. The Smart IC detects the device and charges with the correct current.

As you charge the device the power bank display will rotate between showing you the battery %, the output voltage, and the Amps used by the connected devices.

USB output port 3 will always deliver a maximum of 2.4A regardless of other connected devices. USB output ports 1 & 2 will deliver a maximum of 2.4A combined across the two ports.

How to charge the power bank

Press the power button and the battery capacity % will display. If you wish to charge the power bank continue as below.

To charge the power bank connect a USB cable into the micro USB port on the power bank; connect the other end to your charger (USB hub, USB power socket, computer port). The charging time will depend on the current of the charger, for the quickest charging time use a 2.1A charging output such as a Watts Clever USB charging hub. Computer USB ports are normally much slower.

The battery charge level will show in the display as the battery charges.
