SAFETY INSTRUCTIONS

- Use the correct tools.
- Wear safety goggles & proper safety equipment.
- Follow fixture, power tools & paint manufactures instructions & user manuals.
- Use common sense & follow good construction practices.
- Consult a professional when installing brackets for load bearing application.
- Be sure the bracket has a substructure that is able to support the bracket & any other additional weight that may be added to it.
- When in doubt, consult a professional installer.

Installation Guide:

Step #1:

Measure 3"-6" from the outer edge of the cabinet to place the first bracket. Then place brackets every 16"-20" apart for countertop protection.

Step #2:

Rout or chisel a 2.5" wide by 0.5" deep section at the top of the cabinet on both sides. This "pocket" will allow the Double Sided Island Bracket to sit flush with the top of the cabinet.

NOTE: *It is important that the bracket be flush with the cabinet in order for the countertop to sit level & to protect the countertop.*

Step #3:

Once the "pocket" is made in the cabinet, simply insert the Double Sided Island Support Bracket.

Step #4:

Using a level, make sure your brackets are level; use shims where necessary until the brackets are completely level.

Step #5:

Place your countertop on top of the cabinet & brackets.

Step #6:

Check once again, that the countertop is level. Once level, caulk around the brackets with clear silicone to hold your countertop securely in place.
