

Soft Tissue Root Coverage & Augmentation - Alloderm Using StellaLife® VEGA® Oral Care Gel

Description

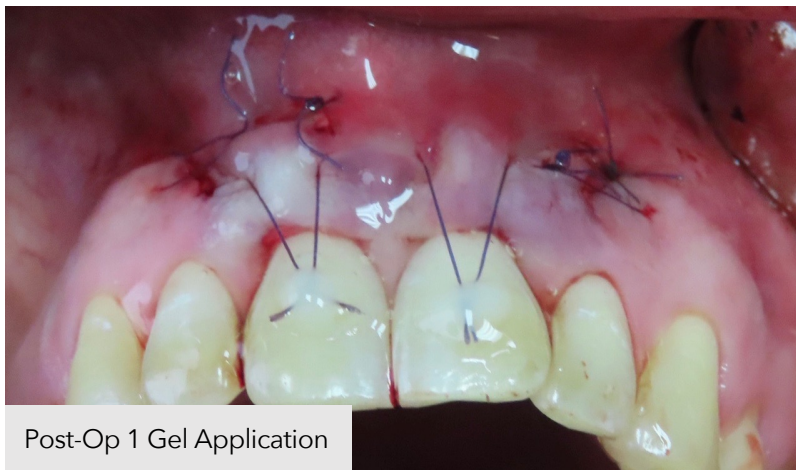

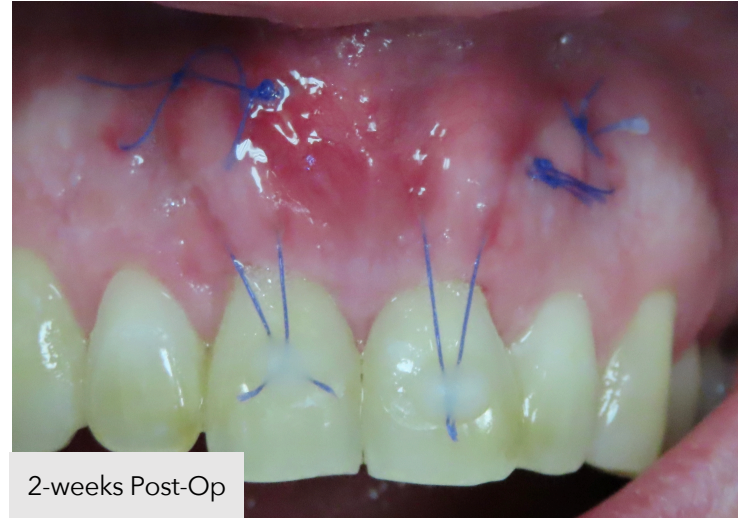

A male patient underwent soft tissue root coverage and tissue augmentation using Alloderm and tunneling.

Method

Patient was seen for 2 weeks post-op. He reported complete recovery from surgery. His pain control was managed by StellaLife Recovery Gel and NSAIDs only. A clinical evaluation revealed complete healing.

Conclusion

StellaLife Gel provided satisfactory pain control and significantly accelerated post-surgical healing. Soft tissue healed in 2-weeks instead of over 4 weeks.
