

# Desquamative Gingivitis Treatment Case Report Using StellaLife® VEGA® Recovery Kit

## Description

50 years old Caucasian male Patient presented for periodontal evaluation. Chief complaint: "Bleeding and very sensitive gums, can not eat".

## Method

Patient was placed on StellaLife recovery kit course three times a day for 2 weeks to address chief complaint and before final treatment plan.

## Conclusion

The patient presented for re-evaluation and finalizing of the treatment plan. The patient reported significant improvement: no bleeding or pain. A clinical exam revealed the normal color and texture of the attached gingival tissue. The patient is ready for the surgical phase of the periodontal treatment, which is planned.

Before

2-weeks: after VEGA Oral Care Recovery Kit
