

Management of Healing by Secondary Intention Using StellaLife® VEGA® Oral Gel and Rinse

Description

Patent developed complete dehiscence of the surgical site and exposure of AlloDerm after connective tissue graft.

Method

Placed on VEGA Rinse and Gel applications.

Conclusion

Completely healed after 3 weeks of using VEGA Gel and Rinse.

1 Pre-op: tooth #8 requires a CTG.

2 Immediate post-op: AlloDerm CTG performed by tunneling technique.

3 10 days post-op: Patient had been using tweezers to pull the edge of AlloDerm because she thought "it was not supposed to be there". Patient told she will likely lose part of the graft. Placed on VEGA Rinse and Gel applications only.

4 10 days follow up after using only VEGA Gel and Rinse

5 Final Check: 3 weeks after
