

Four Dental Implants Case 1-week after StellaLife VEGA Oral Care

Description

Patient had four remaining teeth extracted: significant osseous recontouring, a full crestal incision with significant bone reduction and guided place 4 implants

Method

The patient was placed on StellaLife VEGA Oral Care course three times daily. The patient was seen 1-week after for a follow-up and re-evaluation.

Conclusion

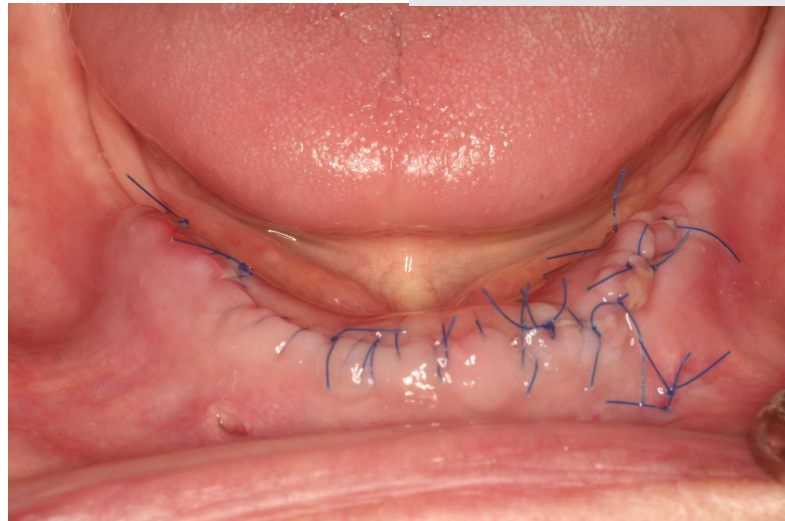

At the 1-week follow-up appointment, a clinical evaluation revealed accelerated healing. Pretty impressive after just one week.

"VEGA Oral Care has become a standard part of our protocol with both our pre implant treatment (extractions and site development) as well as with our implant placement for its consistent impact on optimal tissue outcomes."

Before

1-week after VEGA Oral Care
