

# Lower Jaw Cyst Removal Case Report Using StellaLife® VEGA® Oral Care Recovery Kit

## Description

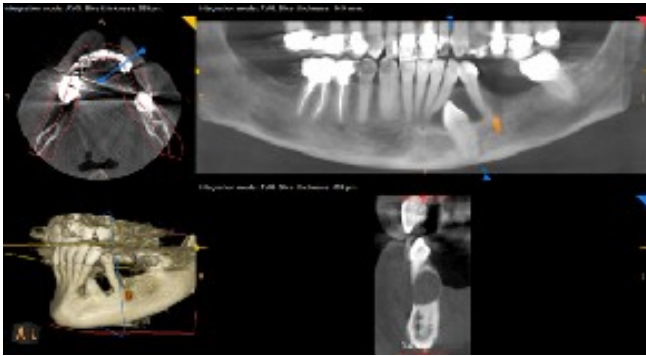

Patient underwent removal of completely bony impacted canine, enucleation of a 18 x 20 mm cyst associated with it and bony reconstruction.

## Method

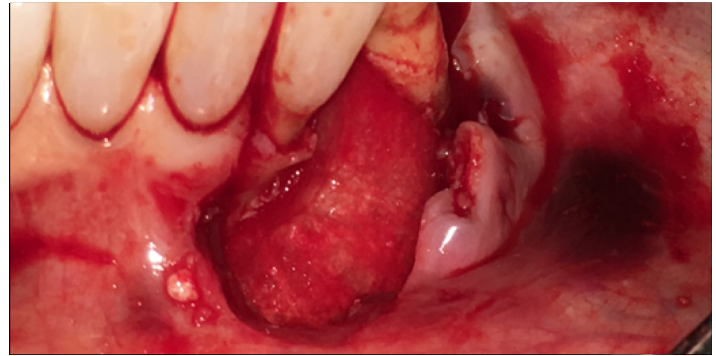

The patient was placed on VEGA Recovery Kit 10 days regimen starting 3 days before her procedure. One week post-op pictures were taken and pain as well recovery evaluated.

## Conclusion

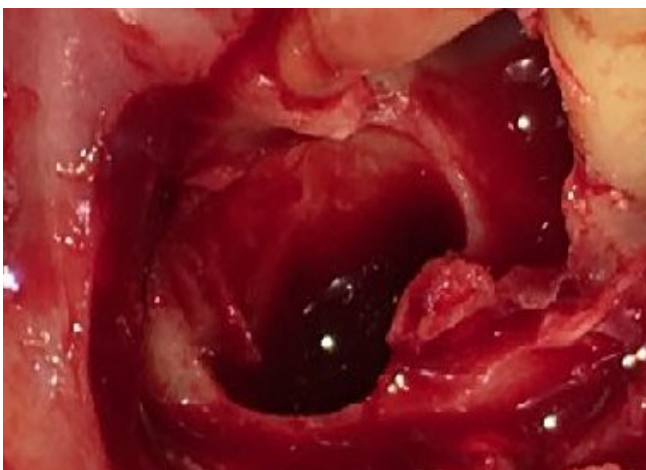

On 1 week post-op visit, soft tissue exhibited accelerated healing normally seen 3-4 week after similar surgery. Patient reported minimal pain and bruising after the surgery. VEGA Recovery Kit significantly accelerated post-surgical healing, decreased swelling and provided adequate pain control.

1. Pre-op: 1.5x2cm Cyst Associated w/Impacted Tooth

3. Patient Underwent Enucleation and Curretage, Bone Grafting

2. Pre-op: 1.5x2cm Cyst Associated w/Impacted Tooth

4. 1 Week Post-op: Accelerated Healing Observed
