

Phase I Ortho: Chronic Inflammation Case Using StellaLife VEGA Oral Care Recovery Kit

Description

Patient is 9-year old African American girl with Phase I Ortho.

Chief Complaint: Chronic inflammation on the gingival margin of #7 & 10 of 1-year duration coinciding with initial application of orthodontic appliance.

Clinal Note: The gingival margin of #7 & 10 was free of any residual cement, calculus, or plaque.

Initial Treatment: No improvement with use of traditional antiseptic rinse, scaling, or oral irrigator for 1 year.

Method

Patient was placed on VEGA Oral Care Recovery Kit (Rinse, Spray, Gel) course: 2x/day all 3-products with brushing (manual) & flossing and continued 1x/day for additional two weeks.

Results and Conclusion:

On Day 3 of StellaLife Protocol, the tissue inflammation resolved completely. The tissue steadily improved as the course continued for two weeks.
