

# Post-surgical Management After Periodontal Surgical Procedures

StellaLife Series Case Report: Jan 2017

**Background:** a series of over one hundred fifty case reports evaluated the effects of VEGA Oral Gel and Rinse as adjunctive therapy for postsurgical management after pocket reduction osseous surgery, connective tissue grafting, extraction and site preservation bone graft.

**Conclusion:** patients on average required fewer narcotic pain medications and recovered more quickly when compared to the control side.

# Post-surgical Management After Periodontal Procedures Using VEGA Oral Care - Summary

- ❖ A split mouth design, applying the StellaLife's VEGA Oral Care only on one side and a standalone, or a combination of Peridex, PRGF, PRP, Emdogain and Periosciences on the other controlled side.
  - ❖ Anesthetic pain relief
  - ❖ Healing was faster
  - ❖ In 1 week Stellalife site looked like 1 month healing with other (Peridex, PRGF, Periosciences, PRP or Emdogain)
  - ❖ Less pain
  - ❖ Less problems (did not have to pay attention to it as the other)
  - ❖ Pain level 5 or less first day, less than 3 other days. Comparing to 7 as anticipated.
- ❖ Over 150 patients unanimously reported having less problems with the VEGA treated side, recovered more quickly when compared to the controlled side and on average required fewer narcotic pain medications.
