

Postsurgical recovery after Tongue Lesion removal Using StellaLife® VEGA® Oral Care Recovery Kit

Description

22 Y/o Patient underwent removal of a Tongue Lesion and four wisdom teeth. The Patient was placed on StellaLife Recovery Kit for post-operative pain control and to speed up the healing process. Differential Dx included: Scwannoma and Granular Cell Tumor.

Method

Patient was seen for 1 week post-op. She reported complete recovery from tongue surgery and removal of four impacted wisdom teeth. Her pain control was managed by StellaLife Recovery Kit and NSAIDs only. A clinical evaluation revealed complete healing with no visible scar.

Conclusion

StellaLife Recovery Kit provided adequate pain control and significantly accelerated post-surgical healing after a tongue biopsy and removal of impacted wisdom teeth.

Post-Op

1-week Post-Op
