

robo

Corporate fact sheet

Robo 3D Limited is a California-based company that designs and distributes 3D printers and associated products for the desktop segment of the 3D printing industry.

History

Robo was founded in 2012 by San Diego State University (SDSU) students' Coby Kabili and Braydon Moreno. Coby, a senior at SDSU, was working on his final project which happened to be utilizing 3D Printed parts for prosthetic limb construction. Tired of the cost of using the university's only industrial 3D printing machine, he set out to build his own from scratch. After beginning product development on a dining room table, he and Braydon went to Kickstarter to seek funding for their consumer 3D printer. With a funding target of \$49,000, a total of \$649,663 was pledged by 1,251 backers.

Robo 3D Limited listed on the Australian Securities Exchange on December 22, 2016 under the code RBO after successfully raising A\$6.0 million.

Mission

Make the Imagined — leveraging a vision to provide everyone a fun, easy 3D printing experience — and empower them to bring their ideas to life with a high-quality printer whose feature set includes everything you'd expect in a modern connected smart device.
