

20' X 40' TUNNEL GREENHOUSE GROW TENT

- Please read and understand the product manual completely before assembly
- Check against the parts list to make sure all parts are received
- Wear proper safety goggles or other protective gears while in assembly
- Do not return the product to dealer. They are not equipped to handle your requests.

Missing parts or have questions on assembly?
Please call: 1-877-761-2819 or email: cs@tmgindustrial.com

MAIN SPECIFICATIONS :

- Assembly size : W6 x L12 x H3 (m) / W19.7 x L39.4 x H9.8 (ft)
- Shoulder wall clearance height : 1.25 m / 4.1ft
- Front roll up door : W1.1 x H2 (m) / W3.6 x H6.6 (ft)

PRIOR TO ASSEMBLY

Please read the instructions carefully before installation. It is important to follow your local safety regulations and industry standards during installation. Regulations may include but are not limited to :

- Safety helmets, protective eyewear, and clothing
- Safety harnesses for all elevated workers
- Proper ladder, cage, and safety operation

Check all components and parts before installation. All parts are marked with a part number, please refer to the parts list to make sure you have all parts.

Choose a day with low or no wind to install, assembly is hard in heavy wind. Do not make any alterations to the structure. Do not hang any weights on the frame during installation, including parts. We are not responsible for any damages or injuries caused by inappropriate installation, unauthorized modifications or extreme weather.

This building is not intended for human occupancy.

It is recommended to tape or add foam/rubber on the frame where joints connect and where it touches the cover. This will help extend the life span of the cover.

Read the following item list carefully and count the number of items to ensure that all parts are included prior to setup.

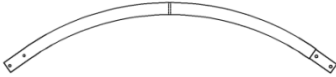

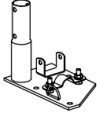

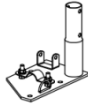

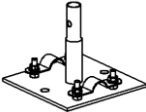

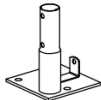

INSTALLATION STEPS

STEP 1 : REVIEW THE WHOLE STRUCTURE AND CHOOSE THE PROPER INSTALLATION SITE

Choose a solid flat level ground area to set up the building. Do not install the building on soft ground, wetland, uneven surfaces, sloped surfaces, or on top of structures that are not rated to hold its weight.

We strongly recommend that you build the structure on a solid foundation such as cement and use anchor bolts on all baseplates.

Be aware of the surrounding area. Do not set up the building near snowdrifts, open flames or exposed electrical wires. Do not keep heat sources near the fabric cover. Keep the building surroundings clear at all times.

TMG-GH2040 PART LIST				
PARTS CODE	GRAPHICAL	DESCRIPTION	LENGTH	QTY
1		Peak arch tube	φ48x1154mm	9
2		Upper rafter tube (middle and rear truss)	φ48x1980mm	16
2A		Upper rafter tube (front truss)	φ48x1980mm	2
3		Shoulder tube (middle truss)	φ48x1335mm	18
4		Lower rafter tube (front and rear truss)	φ48x1139mm	18

20		Door cover	W1140xL2030mm	1

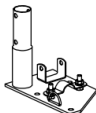

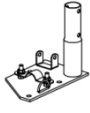

21		Water plug	φ32mm	6
21A		Water plug	30x30mm	4
21B		Water plug	φ25mm	10
22		Top cover	W10520xL12400mm	1
23		Front cover panel	W3220xL59520mm	1
23A		Rear cover panel	W3220xL59520mm	1
24		Braided rope	φ8x100m	1
24A		Ratchet straps	W38xL800mm	18
25		Allen key	4mm	1
26		Scratch resistant tape	10m	2

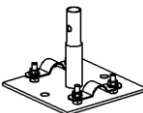

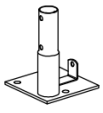

STEP 2 : BASE PLATES INSTLLAION.

Mark the ground in the final building location with a line showing the positions of base plates, front, and rear doors. All lines should be drawn from center to center of all baseplate tubes. Diagonal line X must be equal to Y.

Base plates: all base plates must be installed firmly with expansion bolts (#16) on this step.

6A		2
7		14
16		62

STEP 3 : ASSEMBLE ALL TRUSSES.

- The building includes 9 trusses: (1) front truss, (1) rear truss, and (7) middle trusses. The front and the rear truss are to install with the fabric panel (#23 and #23A).

FRONT TRUSS

17		12x7
19		2x7

- Lay down all (9) trusses on the ground as when the assembly is all completed and before moving to next step.

NO.	PART	QTY
26		2

STEP 4 : PUT UP THE FRONT (1ST) TRUSS.

- Use of a crane or forklift is recommended, otherwise a team can use ropes to lift the trusses, but you have to make sure it is safe, and have enough manpower. We recommend 3 to 5 people to pull the truss up from different directions. When the truss is up, tie the ropes to the heavy objects to make sure the truss will stay upright and use bolt (#17) to connect the truss to the baseplate on both sides.

NO.	PART	QTY
17		4

- Refer to Step 4 to put up the rest trusses, connect all purlins (#5) with bolt (#18) secure all bolts firmly on each span before going to next truss.

5A		70
5B		10
5C		45
17		32
18		80

STEP 5 : INSTALL THE DIAGONAL BRACING BARS (#13).

- Connect diagonal bracing bar (#13) on the first and last span between the shoulder tube and lower rafter tube (#3 and #4) with tube clamp (#13A), use bolt (#19).

21B		6

STEP 8 : INSTALL FRONT COVER PANEL, WHAT YOU SEE IN THIS PICTURE IS THE INSIDE.

- Lift the fabric panel (#23), starting from the center point (the highest ridge point) of the frame, tie the panel firmly to the truss with a rope (A) through the grommet, and then tie one end of (A) to the truss. The woven fabric at the posts (#8) and (#8A) of the door frame is tension with velcro.

NO.	PART	QTY
23		1
24		32m

ROPE CUTTING SIZE		
24		QTY
A	7000mm	2
B	4000mm	4
C	2000mm	1

- Assemble the sliding door. Fix the door column (#14) and (#14A) on the cross pull tube (#15) with bolts (#18A).

18A		8
20		1
21A		4

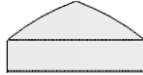

- Sliding door installation. The assembled door cover cloth (#20) of the sliding door cover is fixed on the door frame of the front truss through the hinge.

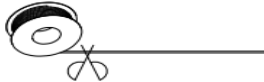

STEP 9 : INSTALL REAR COVER PANEL, WHAT YOU SEE IN THIS PICTURE IS THE INSIDE.

- Use rope (#24) to lift up the rear cover (#23A) from the center grommet and tie it firmly to the truss tube and spread toward both sides through each grommet along the tube.

NO.	PART	QTY
23A		1
24		32m

ROPE CUTTING SIZE		
24		Qty
A	7000mm	2
B	9000mm	2

STEP 10 : INSTALL THE TOP COVER (#22) STRETCH AND TIGHTEN TOP COVER.

DO NOT INSTALL THE COVER DURING WINDY WEATHER!

- Stretch and adjust the cover from back and forth, to make sure it is square and centered.
- Unpack the top cover and place it along one of the long sides of the structure.
- Use 3 to 5 ropes (#24) to pull the cover over the top of the structure, from the inside 2 or 3 people standing inside on ladders to push upwards will help to move the cover without any damage.

NO.	PART	QTY
22		1

STEP 11 : STRETCH AND TIGHTEN TOP COVER.

- The roof cover must be stretched and tied to the front and rear truss by rope going through the flap grommets on the cover. Start from the top center and go toward both side on each end. Add or cut the rope as needed.
- Pull and stretch the cover enough only to take wrinkles out. Repeat for the rear truss. Do not over stretch as it could rip off the grommets.

24A		18

AFTER THE INSTALLATION

Inspect the building periodically to make sure the parts are firmly fixed and the whole building is well supported. Check all bolts and hardware connectors to make sure they are in place and tightened. Check the base plates, adjust the ropes if necessary and clean the cover regularly.

Snow accumulating on the fabric cover must be removed as soon as possible. If the snow had become the solid ice on the cover, it would increase the burden of the roof and collapse the building eventually or reduce the life span.

Keep the building on a dry ground condition most of the time. Do not keep the fabric dirt skirt under water all the time, otherwise the fabric will deteriorate easily.

We strongly recommend you remove any snow from the roof immediately. Do not leave any snow load on the roof overnight. Keep 3 feet of clearance from both sides and two ends of the ground all the time. Do not allow snow to accumulate and pile up on both sides of the building. Otherwise the pressure from both sides will push toward the building and make it collapse eventually.
