INTERIOR COMPONENTS

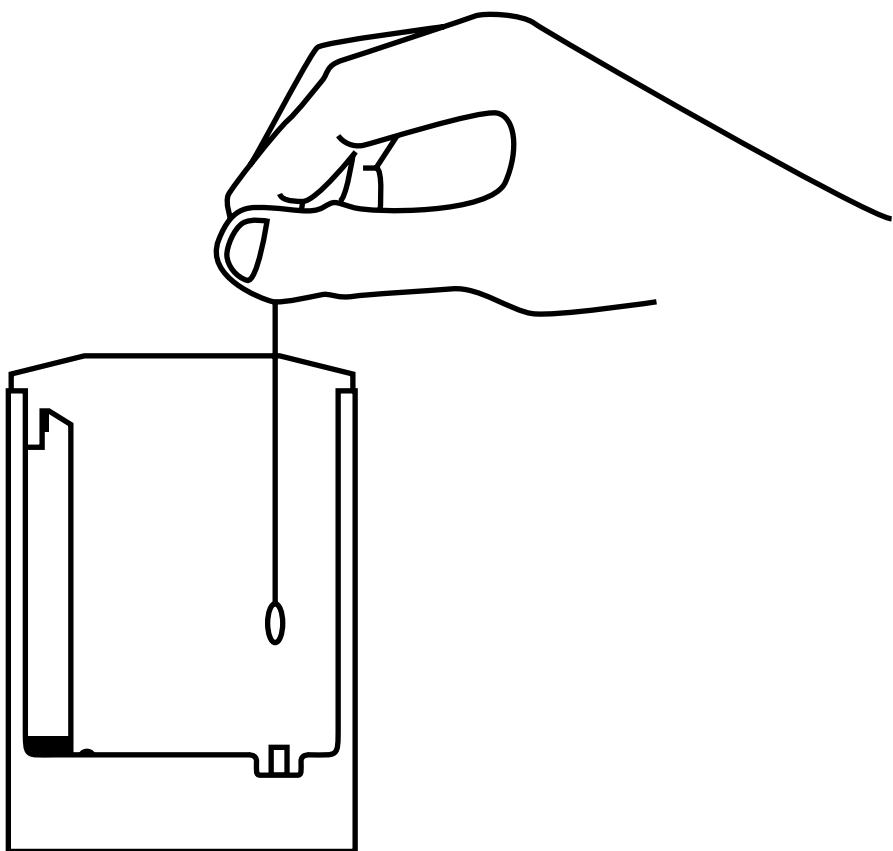

WATER TANK COVER

1. Lift the lid to open.

2. Align the lid with bayonet and groove to close.

Carefully wipe the surface of the mist chip with a cotton swab to remove any dirt. Please avoid using sharp objects.

TROUBLESHOOTING

Light is on but there is no mist

- Rinse the water tank with clean water
- Clean the mist outlet
- Pour out excess water
- Allow diffuser to air dry
- Turn off power and allow air outlet to dry

Weak mist output

- Rinse the water tank with clean water
- Clean the mist outlet
- Ensure the lid is completely closed
- Pour out excess water

Indicator light does not light up

- Reconnect the adaptor or change to a USB cable

Buttons behaving improperly

- Cease operation and air dry diffuser

SAFETY & CARE

- The product supply is 5V. You can power this on through a USB port.
- Clean the mist chip carefully using a cotton swab. Do not touch the diffuser plate with sharp objects.
- Do not pour essential oil directly into the vapour outlet as this may result in blockage.
- Do not pour water into the air outlet, this will result in malfunction. If any water gets in, cease operation and allow the diffuser to air dry.
- Do not use water with a temperature in excess of 60°C.
- Keep the product out of reach of young children.
- Avoid exposing product to the following: Strong magnetic fields, dusty environments, reactive liquids.
- If you wish to use the diffuser in a car, please place the diffuser on a level surface, ensuring that it does not cause any viewing or operating obstruction.
