Customer Focus

Ixia provides application performance and security resilience solutions to validate, secure, and optimize physical and virtual networks.

- **Application performance** means successfully deploying applications across networks so that your customers enjoy a quality user experience
- **Security resilience** means ensuring networks are durable against ever-growing IT security threats, so that your customers are confident their online experience is protected.

Ixia is committed to helping your network perform at its highest level, so that end users get the best performing and most secure experience.

Key Statistics

- Publicly traded: **XXIA** (Nasdaq)
- Founded in May 1997
- IPO in October 2000
- Launched first 10GE testing solution in Q1, 2001
- Complete layer 2-7 solution in 2001
- Delivered world's first 100GE test system in 2008
- Delivered world's first 40GE test system in 2009
- Acquired wireless test company Catapult Communications in June 2009
- Acquired Agilent's N2X IP test division in October 2009
- Acquired Wi-Fi test company VeriWave in July 2011
- Acquired leading network visibility provider Anue Systems in June 2012
- Acquired actionable security intelligence (ASI) pioneer BreakingPoint in August 2012
- Acquired leading network visibility provider Net Optics in December 2013

The Ixia Difference

Ixia's global team has helped overcome most challenges that the evolving Internet has thrown at the world.

Whether games, social media, online banking, video streaming, online shopping, automotive Ethernet, audio/visual services—application traffic IS the network. Now that customers expect network infrastructure to just work—no excuses accepted, whatever the application, the network experience must meet customer expectations.

Making sure you can seamlessly and securely deliver a quality experience to your customers is Ixia's business. We help validate the design, secure the rollout, and monitor the operation stages of your physical or virtual network.

- Comprehensive solutions portfolio to validate, secure, and optimize the complete network lifecycle
- Industry-first solutions developed to provide value in both virtual and physical environments
- Extensive global partner base to deliver solutions to customers worldwide
- Professional services and support to ensure successful deployment and operations 24/7

Ixia helps you monetize your network applications and services by delivering the best network experience to your customers.

Application Performance

- Validate network functions in pre- and post-deployment environments
- Optimize traffic across multiple infrastructures
- Ensure service level agreement (SLA) compliance
- Load balance between functions for optimal application performance

Security Resilience

- Simulate real-world attacks and malware threats
- Deliver real-time threat intelligence for proactive protection
- Harden the resiliency of critical security devices
- Train cyber warriors for attack readiness

Ixia's Powerful and Versatile Network Test, Security, and Visibility Solutions:

- **IxNetwork/IxN2X** – tests IP routing and switching devices and broadband access equipment. Provides traffic generation and emulation for the full range of protocols: routing, MPLS, layer 2/3 VPNs, Carrier Ethernet, broadband access, and data center bridging.
- **IxLoad** – quickly and accurately models high-volume video, data, and voice subscribers and servers to test real-world performance of multiservice delivery and security platforms.
- **IxCatapult** – emulates a broad range of wireless access and core protocols to test wireless components and systems. When combined with IxLoad, provides an end-to-end solution for testing wireless service quality.
- **IxVeriWave** – employs a client-centric model to test Wi-Fi and wireless LAN networks by generating repeatable large-scale, real-world test scenarios that are virtually impossible to create by any other means.
- **BreakingPoint Security** – provides global visibility into emerging threats and actionable insight that can be used to harden and maintain resilient networks and data centers.
- **Anue Net Tool Optimizer™ (NTO)** – achieves complete network visibility with the easiest drag-and-drop control panel in the industry.
- **Net Optics Visibility** – plug-and-play family of application-aware Network Packet Broker (NPB), Virtual/cloud and Visibility Management System (VMS) solutions for virtualization, 10/40/100G, and 4G/LTE networks.
- **Test Automation** – provides simple, comprehensive lab automation to help test engineering teams create, organize, catalog, and schedule execution of tests.

Ixia's Service and Support

Ixia's world-class global support and professional services staff provide remote support, on-site training, test development, and lab-automation services.
