

Monkey Latch™ Base Plate:

Easily secure the Base Plate to your camera via the tripod screw mount. Compatible with most digital cameras (mirror-less, SLR, DSLR, video recorders). It is the fastest system on the market today.

The Monkey Latch™ Base Plate provides an audible click when the base plate is engaged with any Monkey Latch mount. When you hear the click you know your camera is secure.

For added stability when you are using a tripod we have added a lockout on the side of the Base Plate. This removes any movement in the system - providing the stability required during a long capture.

The Base plate includes a soft rubber pad on the back side to provide protection when installed against the base of your camera.

Attachment points are included on the side of the base plate to allow you to customize how your Base Plate works with your system.

Materials

- Body - Molded AA380 aluminum
- Back plate - Stamped stainless steel

Monkey Latch™ Tripod Mount:

Transfer to your tripod instantly. Install to your tripod once and that's it you will have instant and secure changeovers.

Screw into place on any tripod, monopod, grip or selfie stick - any accessory that uses a 1/4-20 mounting screw. Arca-Swiss compatible.
