*NOTE: 2,4-D products require SPRAY QUALITY according to ASABE S572.1 (highlighted in light green). All data in this chart has been sourced from the manufacturers or their websites as at December 2020. Always confirm spray quality data before purchase, as standards may change. While GRDC attempts to include data on as many nozzles relevant to Australian grain growers as possible in this chart, it may not include all of the nozzle models or sizes available at the time of publication. Always check product label requirements for spray quality as well as the source of the spray quality information.

IMPORTANT INFORMATION

Note: This guide does not attempt to contain all nozzle brands, models or sizes that may be fitted to spray systems. It includes the most common or widely-used nozzle types in spraying systems. Nozzle manufacturers continue to release new nozzle models onto the market. Growers should consult nozzle manufacturers to determine the suitability of particular nozzle type/s for their own spraying equipment to ensure that these products comply with APVMA approved product label requirements

DISCLAIMER

This guide has been prepared in good faith on the basis of information available at the date of publication without any independent verification. GRDC does not guarantee or warrant the accuracy, reliability, completeness of currency of the information nor its usefulness in achieving any purpose. Readers are responsible for assessing the relevance and accuracy of the information contained in this guide. GRDC will not be liable for any loss, damage, cost or expense incurred or arising by any person using or relying on the information contained in this guide. Products may be identified by proprietary or trade names to help readers identify particular types of products but this is not, and is not intended to be, an endorsement or recommendation of any products or manufacturer referred to. Other products may perform as well or better than those specifically referred to.

Water volume (L/ha) at various speeds (km/h) based on a 50cm nozzle spacing
