## How To Measure PD?

## How To Use The Tool?

STEP 1: Print this page at Actual Size using 100\% scale on a standard letter (8.5" X 11") size sheet of paper. Or, use just a regular ruler with millimeters!

STEP 2: Hold the ruler just above your child's eyes, keeping it exactly horizontal, and align the ruler's zero (0) measurement to the center of your child's right eye pupil.

STEP 3: Ask your child to hold as still as possible, and read the millimeter line that lines up with the center of their left pupil. Sometimes it's easiest to take a picture of the ruler next to their eyes for a better look! This measurement is their PD.

STEP 4: Repeat steps 1-3 at least one more time (or take a photo) for accuracy.

STEP 5: Email the PD number to orders@jonaspauleyewear.com along with your order number, or include it in the order notes section at checkout if you haven't ordered yet!
$0 \mathrm{~mm} \quad 10 \mathrm{~mm} \quad 20 \mathrm{~mm} \quad 30 \mathrm{~mm} \quad 40 \mathrm{~mm} \quad 50 \mathrm{~mm} \quad 60 \mathrm{~mm} \quad 70 \mathrm{~mm} \quad 80 \mathrm{~mm}$
