KT-3010D Hair Steamer – Rolling Stand Type

- A) Assembled unit – reservoir bottle hanging in the front.
- B) Back of the unit – showing the black rubber cap for draining the water.
- C) Water Bottle and Steamer Control Panel.

Base Legs are 24” long each. The bottom edge of the Hood stands 37” off the floor at its lowest and 51” off the floor at its highest. Hood opening is a 12” diameter.

Water Bottle

KT-3010-D Water Bottle Nipple

Rubber Gasket Inside

Remove the silver cap & nipple and add DISTILLED WATER only to the MAX line on the water bottle. Do not allow the water level to go below the MIN line on the water bottle. Once the bottle has water inside, tip the water bottle upside down and insert the silver nipple into the top of the steamer.

NOTE: Make sure the rubber gasket is inside the silver cap or the unit will not function properly.

NOTE: There is a thermal protection circuit inside the unit that automatically shuts off the steamer if the water level gets too low in the water bottle.

Make sure the residue collection bottle is screwed onto the front of the unit so condensation will be collected during operation – the residue collection bottle should be removed and emptied after each operation and cleaned with mild soap and water.

Remove the rubber stopper from the drain at the end of each day to empty the water reservoir (do not lose the stopper – remember to reinstall the stopper before the next use). Always start the day with fresh distilled water.

1. To start the steamer, press the 350W temperature control switch to ON (I) – within three (3) minutes - the steam begins.
2. Set the timer to the desired steaming time (adding the 3 minutes before the steaming begins) – for a 20 minute steam, set the timer to 23 minutes.
3. After steam forms in the hood, turn ON the 250W temperature control switch and turn the 350W switch to OFF (O) – this is usually the most comfortable heat setting which maintains the proper amount of steam and heat for effective conditioning.
4. Unit can be run with both 250W & 350W “ON” with CARE.

Hair Steamer Benefits:

- **Better Circulation in Scalp leading to better hair growth**
- **Cleanses Scalp, removing dirt and dead skin**
- **Brings moisture to your Roots and hair shafts**
- **Leaves your hair soft and smooth**
- **Great for Dandruff relief**
- **Stops Dryness and hair Breakage**
- **Makes hair stronger and healthier**
- **Improves Hair Color Treatments**

Important Things to Remember When Using a Hair Steamer:

- **Use distilled water when filling up your hair steamer. Unfiltered water contains particles, chlorine and other damaging elements that can shorten the life of your hair steamer.**
- **Never turn the steamer on if there is not water in the tank. Running your hair steamer without water will damage your machine.**
- **Steam is powerful and can be DANGEROUS if not used properly. Check with your client regularly while they are under the steamer to make sure they are comfortable and not getting too hot.**

Hair Steamer - Hair Treatment:

Hair Steamers are more widely used for deep hair treatments such as scalp cleansing, protein moisturizing, color treatments and many other treatments for healthier hair and scalp.

Hair steamers improve circulation, the steam and the heat open up the follicles and hair shaft cuticles, allowing moisture as well as hair treatment products to enter the hair shaft.

The steamer is then set on a cooler setting towards the end of the hair treatment and this closes the hair shaft cuticles and locks in all the deep hair treatment product, bringing moisture to your hair and scalp.

Oils:

Use a natural oil such as coconut or soybean oil to bring moisture to the scalp. The oil is a very good way to lift up dead skin and leave the scalp and hair cleansed.

Protein Conditioner:

Wet the hair using a conditioner, then sit under the steamer for 10 to 15 minutes.

Hair Steamer for Dandruff Relief:

Helps to remove dead skin and fungus build up which leads to a cleaner and itch free scalp. Weekly hair treatments may reduce or eliminate dandruff.

Hair Steamer – General Information:

Hair steamers bring out the natural curl and substance of your hair and help to moisturize it, especially if hair is dry or frizzy.

Hair steamers can change the consistency of the hair, as in changing a hairstyle from naturally straight or wavy hair to curly, or as in a permanent, offering a deep heat conditioning that can't be obtained from a hot air hairstyling product such as a hair dryer or curling iron, as those will work against hair, drying it out.

Hair steamers are good for coloring treatments, as the steamer helps to stimulate the scalp, improve blood circulation and prevent the breakage and loss of hair.

Hair steamers work by the using steam vapor and heat, which opens up the cuticle and allows the color molecules to penetrate deeply and quickly while still maintaining the integrity of the hair.

Compared to conventional over-head dryers, hair steamers allow for shorter processing times because the color does not take as long to penetrate the cuticle.

Hair steamers are good for stubborn colors like red, that have a hard time getting into the hair due to their larger color molecule makeup.

Hair steamers can also be used with conditioning and other hair treatments. The steam will drive the product deep into the hair, leaving it smooth and shiny.

Hair steamers are good for dandruff and itchy scalp. The steam will infuse moisture into the scalp and the heat will kill any fungus or bacteria that may be causing the itching.

Hair steamers can be used with all types of hair color, no need to adjust what is already being used. The steam needs to reach the hair in order to work.

General Tips:

- **Steam hair no more than 2 times in a week for about 20 to 30 minutes to get the full benefit. Some sessions can go over an hour for more damaged hair.**
- **Hair will feel a little heavier and full of moisture after a steam treatment, during this time, handle hair with care, wait until hair and scalp have cooled down until styling.**
- **Damaged Hair - Increase Temperature Decrease Steam if possible**
- **Chemicals or Color Treatment - Skip cooling step**
- **Conditioning Thick Hair - Extend Steam Time**

Steamer Guide (times may vary, check regularly):

For all Hair Types - Moderate Mist and Temperature, 8 minutes warm and 2 minutes cool down

Hair Products that Absorb Slowly - Low Mist and Moderate Temperature, 10 minutes warm and 2 minutes cool down
