TRUNNION SERIES

Specification:

FLANGED END BALL VALVE - TRUNNION SERIES

The two-piece ball valve has been designed to handle extreme service applications with unsurpassed reliability. Valve body machined from solid wrought material providing maximum strength and virtually no porosity. These ball valve integrates the proven sealing technology and the design capability to tackle the most demanding applications.

Features	Benefits
Total encapsulated body seals	Elimination of cold flow; high performance over wide temperature and pressure range
Actuation Flange	Ease of automation
Variety of seating materials	Wide range of process media and service conditions
Live loaded stem	Pressure and temperature recovery, stem seal integrity with a low operating torque
API wall thickness	Extra corrosion allowance for long life
Forged body and end	High integrity
Fully traceable materials	Certification of all pressure retaining parts available for stringent specification requirements

Design Specification:

- ASME B16.5: Pipe flanges and flanged fitting
- ASME B16.10: Face-to-face dimensions of ferrous valves
- ASME B16.34: Steel valves (performance and design)
- API 598: Tested & Checked
- API 6D (Pipeline valves) & API 607 (Fire Safe)
- MSS-SP 72: Ball valve for general service
- NACE compliant

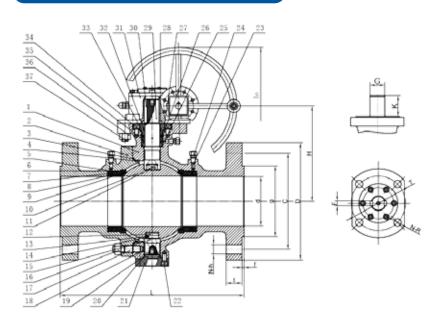

Locking Plate:

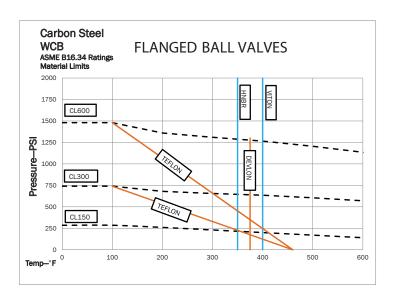

As per OSHA requirements, these valves offers a simple cost effective temper proof locking mechanism that can be used in either the open position or closed position. Once the padlock is inserted, the lock plate cannot be removed from the valve even if the handle nut is removed.

^{*} Due to the continuous development of our products, design or construction may change without prior notice.

NOTE:

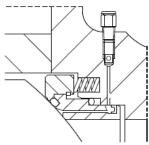

All valves are hydrostatically pressure tested in accordance with ISO 14313/ API 6D under the supervision of Quality Department. A complete range of equipment and instrumentation is available to perform both standard and special test requirements.

TRUNNION SERIES

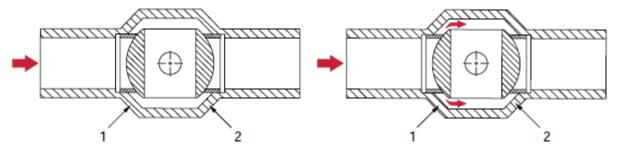

Additional Specification - Trunnion Ball Valves

Standard Design Features:

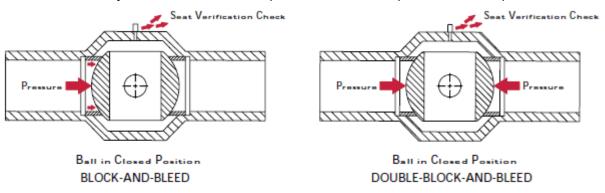

- Body construction: 2 piece bolted body design as per API 6D, API 608 & ASME B 16.34
 - Face to face dimension: ASME B16.10 & API 6D.
 - Flanged ends: ASME B16.5
- Anti blow-out stem design.
 - The stem features triple barrier seals to isolate the stem from line pressure and to seal from the atmosphere.
- Low Friction metal-backed self lubricating PTFE sleeve bearings and thrust washers to reduce torque and extend service life.
- Primary Metal to Metal and secondary soft RPTFE.

- Double barrier sealing in both directions.
 - The upstream seat (1) becomes damaged and leaks, pressures entering the body cavity act on the downstream seat (2) sealing the downstream seat tightly against the ball.

• Block and Bleed: cavity relief valve for over-pressure due to liquid thermal expansion.

- Stem and seat sealant injection system.
 - When the sealing materials (seat sealing or stem o-ring) are damaged or decomposed by fire or other accidental causes, leakage from the seat and stem can be prevented by injection of sealant into these fittings.
