

THYROID

Description: Each capsule contains 300 milligrams of **range grazed/grass fed bovine thyroid**. Why such a high dose per capsule? Unlike porcine thyroid, the cross-species specificity of bovine is significantly lower than porcine material. Plus, porcine thyroid material is not available to purchase unless you have a DEA number. Zorex does not have a DEA number (drug license). However, during the clinical trial, THYROID was able to lower thyroid stimulating hormone (TSH) to a metabolic level in 17 of 19 participants.

Clinical Considerations:

THYROID should be considered in the following changes in the TSH.

If the TSH is > 2.5 but < 7.5, consider one capsule per day.

If the TSH is > 7.5 but < 12.5, consider two capsules per day.

If the TSH is > 12.5 but < 20, consider three capsules per day.

In any case iodine as potassium iodide and selenium (both contained in KI Plus Capsules should be used at one per day or higher if testing justifies more than 12.5 milligrams per day if justified by testing. In any case iodide is needed, and if the T-4 to T-3 ratio is weighted to the T-4 side selenium is needed the agent that removes one molecule of iodine from T-4 and moves it to T-3 is 5' deiodinase and the heart of 5' deiodinase (combination of 2 and 3 deiodinase) with heart of all three deiodinases selenium. Selenium insufficiency reduces the ability to transfer one molecule of iodine from T-4 to T-3 with resulting thyroid hypofunction.

Added Information: In order to determine patient's long-term thyroid support, a serum thyroid panel should be completed after 45 days on thyroid supplementation.

Availability: Thyroid is available in 60 capsule bottles.
