SPIRIT HELMET
SEE PAGES 10-11
At Troxel, we want your customers to be confident when purchasing an equestrian helmet. We understand that safety, comfort, and innovation are all at the forefront of their minds when selecting a helmet. That's why we're adamant about our next generation Terrain Helmet.

We are proud to offer consumers a unique **60-Day Test Ride Guarantee** on the most highly ventilated equestrian helmet in the industry. If, for any reason, your customers are not completely satisfied with a Terrain Helmet, they can simply return it to the place of purchase along with the original receipt within 60 days for a full refund.

Please call 800-932-8371 so we can provide assistance with a Troxel Helmet refund.

---

Patent #6,085,357 applies to all Troxel® helmets.
Established in 1898, Troxel is recognized for its innovative design and physician-developed helmet research leadership. With over four million helmets in the market and a safety record that is second to none, Troxel is the world's leading provider of ASTM/SEI-certified equestrian helmets.

HOW OFTEN HORSE-RELATED INJURIES HAPPEN

• About 70,000 people go to the emergency room each year for equestrian-related injuries. About 12,000 of those people have suffered head injuries.
• Horseback riders have the same number of injury accidents per riding hour as motorcycle riders.

WHO GETS INJURED?

• All riding disciplines have a significant rate of head injuries. Head injuries are the most common reason for equestrian-related hospitalization and fatal injuries.
• Unpredictable riding events — a horse spooking, bucking, or bolting — account for most head injuries, but 20% happen during non-riding activities or as a bystander.
• The risk of injury is tied to cumulative riding time, not level of expertise.
• Taking it slow isn’t the answer, either: Severity of the injury is most closely influenced by your distance above the ground. A fall from only 2 feet high can cause permanent brain damage.

HOW HELMETS PROTECT YOU

• When you take a fall, a certified helmet absorbs energy by crushing and extending your head’s stopping time to reduce the peak impact on the brain significantly.
• Helmets are built to compress and fracture on serious impact. A broken helmet is not a sign of a faulty one — in fact, it may crush or crack as it absorbs the energy that could otherwise cause you serious injury.

HOW OFTEN SHOULD HELMETS BE REPLACED?

• All Troxel helmets involved in an accident should be replaced immediately. They are only designed for one impact event.
• Due to evolving standards, technologies and the potential for unforeseen material deterioration, it is recommended that a helmet be replaced at least every five years from the date of purchase. Those who ride more often should replace their helmet more often.
The #1 equestrian helmet just got better. The Spirit is now available with Mips Technology that can reduce certain rotational forces to the head in the event of a fall. Pairing the Spirit’s renowned comfort with fashion, flaunt our chic colors and the Mips exclusive “Desert Shadows” graphic. Explore the Spirit with Mips along with other fun colors, and captivating new designs for your favorite Troxel helmet styles in our 2024 catalog.

See pages 39 and 40 for our new Troxel hats, shirts, pullovers and vests for 2024!
WITH PATENTED Coolcore® HEADLINER TECHNOLOGY

HIGHLY VENTILATED EQUESTRIAN HELMET

Extra large vents deliver highest ventilation in the industry

Co-molded, impact resistant polycarbonate shell

Impact absorbing EPS liner

Front cage reinforcement

Reinforced bottom edge

Removable, washable Coolcore® headliner with chemical-free, antibacterial FUZE technology

Shatterproof, removable and replaceable TPU visor

Latest generation, micro-adjustable DialFit™ system

TERRAIN

The low friction layer allows a multi-directional movement of 10–15 mm on certain angled impacts, intended to reduce rotational force to the head. Learn more: mipsprotection.com
Available with Mips® safety technology intended to reduce rotational forces, the Terrain is the most feature-rich helmet we have ever built. 12 vents scoop up industry-leading amounts of air to complement our moisture-wicking Coolcore® headliner treated with antibacterial FUZE technology for the ultimate synergy in cooling comfort. The polycarbonate shell is co-molded to the EPS liner with a front cage for the perfect combination of lightweight performance and strength. All rounded off by a shatterproof, replaceable visor and a micro-adjustable DialFit™ system, the Terrain helmet is one of the best.

**MIPS® – SAFETY FOR HELMETS**
- We know from scientific research that the brain is particularly sensitive to rotation. In the event of an impact, the helmet technology provided by a Mips® safety system is intended to help reduce the impact of rotational energy on the head by enabling a relative movement between the head and helmet.

**HIGHLY VENTILATED HELMET**
- The equine helmet industry’s leader in ventilation performance
- Highly engineered vents maximize airflow
- 12 extra large vents are strategically-placed for maximum cooling

**PATENTED COOLCORE® HEADLINER TECHNOLOGY**
- Chemical-free cooling technology
- Moves moisture and sweat away from your body
- Dissipates heat to regulate core temperature
- Cooling lasts lifetime of material
- 100% machine washable
  U.S. Patents #9,121,642 and #8,440,119

**ECO-FRIENDLY TECHNOLOGY STOPS ODOR AT ITS SOURCE**
- Permanent, chemical-free, anti-odor technology
- Uses a mechanical breakdown to kill bacteria rather than a chemical reaction
- Precisely targets only odor-causing bacteria and fungus that come in contact with the treated surface
- Proven to maintain efficacy for over 100 washes
The low friction layer allows a multidirectional movement of 10–15 mm on certain angled impacts, intended to reduce rotational force to the head. Learn more: mipsprotection.com
With the integration of the Mips® safety system, the Terrain includes a low-friction inner layer to help reduce rotational impact to the head. With 12 vents, added safety features and cutting edge innovations like the patented, moisture-wicking Coolcore® headliner treated with FUZE technology to fight odor-causing bacteria, the Terrain is one of a kind.

FIT A HELMET IN 3 EASY STEPS

1. Try
   A) Open the DialFit™ if the helmet comes with this feature.
   B) Try on the helmet. It should fit snug but not be uncomfortable.

2. Adjust
   A) Adjust the inner padding by folding under the FlipFold™ tabs for more or less cushion.
   B) Adjust the slide glides on the straps to sit underneath the ears to form a “V”.
   C) Adjust the length of the retention system straps to fit snug under their jaw and use the o-rings to secure the excess.
   D) To fine tune the fit, engage the DialFit™ or adjust the slider on the elastic bands of the SureFit™.

3. Check
   With the helmet level on their head, check the fit and straps and make sure the buckle is locked securely.
HELMET SIZE GUIDE
How to choose a Helmet Size

1 Measure
Use a measuring tape to measure around the head one inch above their eyebrows. Or use a string to measure and then lay it out and measure the length of the string.

2 Choose Size
Use this chart to convert measurement to hat size:

<table>

 Disclaimer: This conversion chart is a guide only and does not constitute a guarantee as to the fit of the helmet. Some people may have a unique head shape changing what size they need. Some helmets fit different shaped heads better than others.

3 Select a Helmet
Select the helmet model they would like to purchase and review the specific size range available in that model.
What is MIPS®?
A technology, built into helmets and designed to help reduce rotational motion to the head that could occur in so-called oblique impacts. For certain impacts, the Mips system can reduce harmful rotational motion that might otherwise be transferred to the user’s head.

We have over 25 years of research into rotational motion and helmet safety, and an abundance of studies and data that say the same thing: in the vast majority of accidents in which someone hits their head, the impact is oblique, and an oblique impact entails increased the risk of brain damage. The same thing goes for objects falling from above at, for instance, a building site: they cause an oblique impact – even if you are standing still.

MIPS Means Addressing the Rotational Motion
If you ride, and fall and hit your head, you are likely to experience an oblique impact. The moment your head hits the ground at an angle, rotational motion can make the head rotate more or less, depending on the impacting object or surface. The energy from the impact can be directed further into the head, which can cause brain injury. Rotational motion is thus the result of oblique impacts to the head.

The brain is more sensitive to oblique impacts versus straight impacts. Oblique impacts are also much more common. But most helmets on the market today are only tested and approved for straight impacts, even though these kinds of accidents are far less common.

How Does the MIPS System Work?
Should you have an accident and hit your head, the Mips system in your helmet is designed to help reduce the rotational motion of certain impacts that may otherwise be transferred to your head.

Mips is designed to help reduce rotational motion to the head in oblique impacts. Everything revolves around Mips low-friction layer. It mimics the brain’s own protective system, which allows the brain to move slightly inside the head. The Mips system is designed to work on the same principle. The low-friction layer is built into the helmet and makes the energy-absorbing layers (the “padding”) mobile so that the head can move 10–15 mm inside the helmet on impact.
TECHNOLOGIES

Adjustable fit systems provide customers with the opportunity to quickly customize fit. Advantages include: lower inventory requirements and additional helmet room to accommodate unique head shapes and various hairstyles.

SureFit™ System
The SureFit incorporates elastic straps that self-adjust to the size and shape of the rider’s head. With ultra-plush padding, the SureFit provides an unmatched level of comfort and stability.

FlexVisor™
Molded from a flexible polymer, Troxel's FlexVisor won’t shatter into sharp pieces, reducing the possibility of cuts and scrapes in the event of a fall.

DialFit™ System
Soft-touch dial permits quick and precise helmet adjustment for personalized comfort.

FlipFold™ Fit Adjustment
The removable and washable FlipFold headliner provides adjustment to the helmet’s width to accommodate different head shapes. Adjustment is made by folding over the integrated tabs.

Duratec™
The Duratec finish provides improved scratch and dirt resistance with a rich matte finish. Duratec™ can be washed with soap and water to restore the original look.

ASTM/SEI Certification – Official safety certification of equestrian safety helmets in the United States. Troxel manufactures only ASTM/SEI-certified helmets. The Safety Equipment Institute (SEI) is an independent, accredited organization that certifies the American Society for Testing and Materials (ASTM) standards are met. The ASTM F-1163 standard for equestrian head gear has been revised numerous times since its initial publication in 1988. Each revision reflects ASTM's technical committee's ongoing effort to clarify, correct or improve the standard and provide consistency in testing. A helmet which has been ASTM-certified to an earlier edition remains certified even though newer models are always certified to the most recent edition.
