

JKU Rear Install Instructions:

Welcome to the SPIDERWEBSHADE® JK family. Here are a few tips to make your install easier.

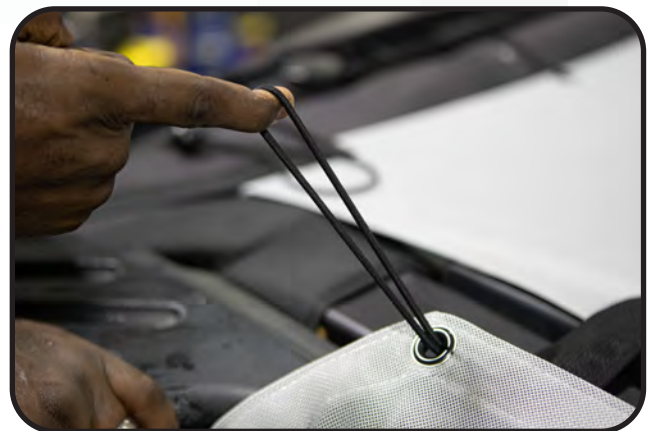

1

Start with the front 2 corners. The Spiderballs can share the Freedom Top Bolt Holes with the JKini if you using both systems.

2

Insert the cord from the bottom up through the bolt hole and then through the bottom front corner of the JK 4D Rear.

3

Pull the cord forward to the front seats and back to it's self(be sure these cords are installed on the outside of the 2 JKini straps if using both shades together).

4

Now move to the back and lock in the back left and right corners(be sure the cord is installed under the seatbelt bracket and back to it's self).

5

Then the remaining 4 Spiderballs to complete your install.
