Care Instructions for Spiked Wooden boards.

The spikes supplied with your board will all be fitted in place. They simply screw in hand tight, no tools needed. They may not necessarily screw all the way down the thread. They are all stainless steel so will not rust, as are the fixings they screw in to. When not in use keep the spikes in a safe place, preferably in a small box or bag.

Do

Take care with fingers, the spikes are very sharp and pointy

Clean the board with a wrung out damp cloth, drying after with a towel. A normal kitchen anti-bacterial spray can be used.

Dry before putting the board away

Apply periodically, a light coating of walnut oil, mineral oil or beeswax to restore the lustre and condition.

Don't

Immerse in water, or place in a dishwasher as this will significantly reduce the life of the board. The appearance of the wood may naturally darken over time.

Leave to dry or place near a radiator, this will dry out the wood and can cause warping.

Place on top of cookers or stoves, this is a potential fire hazard and can also warp the board
