Mini2 or LCD on your Mini Printer

If you are installing this enclosure on a Mini2 or a Mini printer with an LCD you will need to make a few changes to the assembly instructions. This is a supplement to the included instructions.

1. In **Step #1** in the instructions you will print 2 left brackets, one right bracket and one of the LCD Mini Brackets found at <https://www.printedsolid.com/collections/enclosures/products/3d-printed-brackets-for-lulzbot-mini-enclosure>
2. In **Step #12** when assembling the front cover you will leave out part “H”. It is not necessary and will make it so there is plenty of room behind the cover.

That is it.
