STONE FOREST EXAMPLE INSTALLATION

Rough Basin with hole drilling

Items used for setup: 36" Round Basin, 1/2" hosing, #DPEI size pump, pebbles

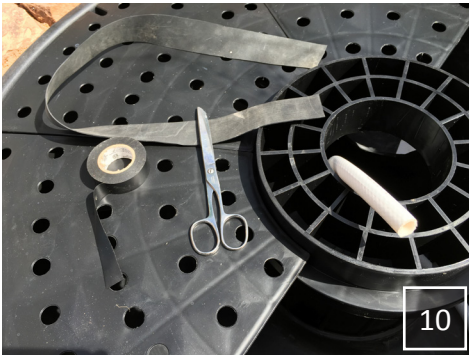

Image 1. Pick the spot you'd like to display your fountain and get out your tools.

Images 2 – 7. Dig a hole for the 36" Round Basin Kit and use play sand to level the bottom surface. Get the basin as level as possible from left to right and front to back. Fill dirt in around the edges so it's nice and snug.

Images 8 – 9. Place the pump at the bottom of the basin and connect it to the 1/2" hosing, and feed it up through the center trunk of the basin.

Images 10 – 15. To fill the space around the hose and fit it snugly into the top of the core-drilled hole, wrap the top part of the hose with a strip of pond liner and electrical tape as shown.

Image 16. Pull the pump's cord out through the cutout in the side, and place all the panels around the fountain.

Image 17. Empty your bags of river pebbles around the fountain to hide the basin below. Fill the basin with water using a garden hose.

Image 18. Plug the pump in, and VOILA! Grab a lounge chair and prepare to be relaxed by the soothing sounds of your new fountain.
