

# SANI-SYSTEM

## Liquid Sanitizer Concentrate

### The industry's only EPA & NSF approved sanitizer delivers reliable, effective results every time.

Sani-System is the only EPA & NSF approved sanitizer for use in water softeners and reverse osmosis units. It's proven to kill 99.99% of harmful bacteria without the use of chlorine, oxidizers or acids that can harm system equipment parts and resin. The exact pre-measured doses are perfect for both water softeners and RO units. One Sani-System packet contains a concentrated formula that sanitizes equipment in just 60 seconds.

#### Application:

##### Water Softeners

1. Pour entire packet into the brine well. If no brine well is present, pour entire packet into bottom of brine tank when salt is nearly empty.
2. Manually regenerate the softener according to the manufacturer's specifications. Regenerate a second time if necessary.

##### Reverse Osmosis (RO) Units

1. Shut off water supply to RO unit and remove membrane and all filters. Use rubber gloves and store filters and membranes in water to prevent damage.
2. Open pure water faucet and depressurize system.
3. Pour entire packet directly into first main housing unit. Make sure pure water faucet is closed and turn on water supply.
4. Allow system to fill with water. Time will vary depending on water pressure. However, system should be full within 5 – 10 minutes without filters or membrane. Flush system two times.
5. Replace or re-install membranes and all filters.

\*Leave membrane in unit for complete disinfection. Note: Sanitization time will increase significantly.

#### User Benefits

- Faster, easier and safer than other alternative sanitizers
- Easy and reliable single dose packets
- 99.99% effective kill rate against harmful bacteria
- Only sanitizer on the market proven by the WQA to safely sanitize an RO unit membrane

#### Technical Information

- Sani-System is a clear liquid and will react to oxidizers
- Routine storage. Rubber gloves are suggested when handling this product. Read relevant MSDS before handling product.
- Do not mix with other chemicals.
- Certified to NSF/ANSI 60 Standards

The Sanitizing Standard

Part #	Size	Quantity
RO Unit Sanitizer:		
F-SS24RO	0.25 fl. oz.	24 Packets
F-SS96RO	0.25 fl. oz.	96 Packets
Water Softener Sanitizer:		
F-SS24WS	0.5 fl. oz.	24 Packets
F-SS96WS	0.5 fl. oz.	96 Packets
