

USER  
**GUIDE**  
LEATHER MILK  
**STRAIGHT**  
**CLEANER NO. 2**

**WHAT YOU NEED**

**BEFORE YOU START MAKE SURE YOU ARE PREPARED**

---

- Ensure leather is dry when you begin. Try to brush off any surface dust to ensure maximum absorption.
- Test the Leather Milk Straight Cleaner No. 2 on a small, discreet area of your leather item, even if you have applied this solution to other items with great success. Each piece of leather can react differently to a cleaner.
- Prepare a space for cleaning by laying out newspaper, cloth or towel on the floor or table in an outdoor or well-ventilated environment. Avoid exposure to direct sunlight.

## **METHOD**

**1** Spread Straight Cleaner evenly over leather's surface. Apply thin layers, only as much as leather can absorb. Excess use of leather cleaner may lead to dye rub off or dehydration in your leather. Massage in circular motions until surface is adequately spread.

---

**2** Wipe off any residual fluid. Allow leather to dry naturally. After leather has dried, follow up with leather conditioner, such as Leather Care Liniment no. 1.

## PRECAUTIONARY NOTE

---

- Keep the Leather Milk solution out of reach of children and away from extreme temperature.
- Do not allow the solution to get into the eyes or be consumed internally.
- Do not use your treated item until it is totally dry to avoid any possibility of skin irritation or stain on your skin or clothing.
- Always wash your hands with soap and water after use and before touching eyes or consuming food with your hands.
- Do not use this cleaner on naked leather, nubuck, suede or untreated leather. Use Straight Cleaner only if your leather is excessively dirty, or for periodic cleaning.
- Do not use this product if you have nut-allergy.

# REMEMBER

**1** Always conduct a patch test on an inconspicuous area of your item to ensure that the product is suitable for use before proceeding further. It is especially important to test any leather treatment before using it on vegetable tanned, aniline, semi-aniline, or lighter colored leathers.

---

**2** The surface of the treated item may look darker when you first treated it. It should lighten up when it is completely dry.

---

**3** Read the manufacturer's tags or instructions before applying any treatment or solution to your item to ensure maximum protection and adherence.
