LEATHER MILK
WATER
PROTECTANT NO. 3

WHAT YOU NEED

BEFORE YOU START MAKE SURE YOU ARE PREPARED

- Make sure your leather item is dry, clean and free of dust, dirt or grease before using the Leather Milk Water Protectant No. 3. Dust and debris not removed will be sealed inside leather's pores once Water Protectant is applied.
- Test the solution on a small, discreet area of your leather item, even if you have applied this product to other items with great success. Each piece of leather can react differently to a solution.
- Prepare a space for cleaning by laying out newspaper, cloth or towel on the floor or table in an outdoor or well-ventilated environment. Avoid exposure to direct sunlight.

METHOD

1

Clean leather before using with deep leather cleaner, such as Straight Cleaner no. 2. After leather has dried naturally, gently massage Water Protectant evenly across leather surface. Uneven spread may lead to splotchy dry.

2

Use thin layers, giving leather as many coats as it needs, but only as much as it can absorb. If piled on too thickly, leather conditioner will leave sticky residue.

3

Buff off any excess or remaining solution. For best results, allow your leather article to dry overnight.

PRECAUTIONARY NOTE

- Keep the Leather Milk solution out of reach of children and away from extreme temperature.
- Do not allow the solution to get into the eyes or be consumed internally.
- Do not use your treated item until it is totally dry to avoid any possibility of skin irritation or stain on your skin or clothing.
- Always wash your hands with soap and water after use and before touching eyes or consuming food with your hands.
- Do not use this solution on naked leather, nubuck, suede or untreated leather.
- Do not use this product if you have nut-allergy.

REMEMBER

1 Always conduct a patch test on an inconspicuous area of your item to ensure that the product is suitable for use before proceeding further. It is especially important to test any leather treatment before using it on vegetable tanned, aniline, semi-aniline, or lighter coloured leathers.

2 The surface of the treated item may look darker when you first treated it. It should lighten up when it is completely dry.

3 Read the manufacturer's tags or instructions before applying any treatment or solution to your item to ensure maximum protection and adherence.
